behavior university rbt training: Behavior Modification in Black Populations Samuel M.

Turner, 2012-12-06 During the past decade, research and practice in the field of behavior modification have experienced phenomenal growth. Behavioral intervention strategies that were considered strictly experimental a few years ago are now accepted therapeutic modalities, and behavioral methodology has been instrumental in creating an atmosphere conducive to the development of scientific rigor in the area of mental health. But behavioral influence has not been limited to mental health. There has been considerable impact in education, industry, government, and general health care. Although behavior modification has made a significant impact on psychology in general, there has been a noticeable lack of theorizing and empirical research on issues primarily related to black populations. In fact, the black community in general, and black psychologists in particular, often have viewed behavioral approaches with suspicion. We hope that the material presented in this volume will serve to clarify what the behavioral approach is and what it is not and that it will help to foster an understanding of the behavioral approach. Moreover, empirical data demonstrating the effectiveness of behavioral procedures with black populations are presented. It is our hope that the material will provide some insight into how behavioral theory, methodology, and therapeutic strategies can be used to the benefit of black mental health in particular and the overall psychological health of the black community in general.

behavior university rbt training: Recalibrating Juvenile Detention David W. Roush, 2019-02-07 Recalibrating Juvenile Detention chronicles the lessons learned from the 2007 to 2015 landmark US District Court-ordered reform of the Cook County Juvenile Temporary Detention Center (JTDC) in Illinois, following years of litigation by the ACLU about egregious and unconstitutional conditions of confinement. In addition to explaining the implications of the Court's actions, the book includes an analysis of a major evaluation research report by the University of Chicago Crime Lab and explains for scholars, practitioners, administrators, policymakers, and advocates how and why this particular reform of conditions achieved successful outcomes when others failed. Maintaining that the Chicago Crime Lab findings are the gold standard evidence-based research (EBR) in pretrial detention, Roush holds that the observed firsts for juvenile detention may perhaps have the power to transform all custody practices. He shows that the findings validate a new model of institutional reform based on cognitive-behavioral programming (CBT), reveal statistically significant reductions in in-custody violence and recidivism, and demonstrate that at least one variation of short-term secure custody can influence positively certain life outcomes for Chicago's highest-risk and most disadvantaged youth. With the Quarterly Journal of Economics imprimatur and endorsement by the President's Council of Economic Advisors, the book is a reverse engineering of these once-in-a-lifetime events (recidivism reduction and EBR in pretrial detention) that explains the important and transformative implications for the future of juvenile justice practice. The book is essential reading for graduate students in juvenile justice, criminology, and corrections, as well as practitioners, judges, and policymakers.

Each chapter incorporates critical and under-discussed topics unique to research ethics in behavior analysis such as diversity, equity, and inclusion in the research process; balancing methodological rigor with clinical outcomes; aligning research and clinical goals; assessing generalization of research findings; the gray lines of assent
