cerner powerchart training manual for nurses: *The PEACE Model Evidence-Based Practice Guide for Clinical Nurses* Joyce Fitzpatrick, Reynaldo Rivera, 2021 Nurses are in charge of the patients and their families throughout the hospital and health system experience. They assist patients through illness to achieve higher levels of health. They coordinate the care throughout the patients' experiences with the healthcare system. Nurses are the leaders of patient care at the bedside and beyond. It is important that as clinical leaders, nurses have the most accurate, most up-to-date, and evidence-based information available so that they can always do the right thing. The

PEACE model develops clinical nurses as leaders in care of both patients and their families. Clinical nurses, those at the point of care, have embraced this model for guiding their practice. The PEACE model helps clinical nurses solve challenging problems through a rigorous evidence-based practice process-from problem identification to evaluation and dissemination. The crux of the PEACE model is the mnemonic that simplifies the evidence-based practice (EBP) process for clinical nurses. The PEACE model is used across New York-Presbyterian (NYP), one of the nation's most comprehensive academic healthcare delivery systems. NYP is composed of 10 hospitals in New York and employs more than 11,000 nurses across the enterprise. One striking advantage of the model is that it emerged from the work of clinical nurses who were struggling to find a way to remember and apply the components of other EBP models. The mnemonic PEACE promotes understanding and application by clinical nurses, providing a way to easily remember the EBP component stages. The uniqueness of the PEACE model is its simplicity. This relevance leads to continued application in day-to-day nursing practice. As we strive for peace at many levels of our lives and work, the mnemonic is easy to remember. The PEACE model may be adapted to any setting where nurses practice--
