My first full-time employment after graduation was with Federal Food and Drug Administration. The duties consisted of analyzing food and drugs that was being sold in the United States. It also included in analyzing food products imported from foreign nations for any pest contamination. The food products from large food-producing manufacturers were also analyzed for

pest contamination and content. The drugs were analyzed for amount specified on labels. There were numerous FDA laboratory districts established nationwide. The Detroit district employed about forty analytical chemists and about forty to fifty inspectors. Our district director emphasized on us the importance of our work. Two of the important items mentioned to our occasional gathering emphasized the importance of FDA work: One was the advent of sulfa drugs prior to antibiotics that were widely used, and they were highly not soluble. Someone at one of the manufacturing outfits figured out a way of dissolving the sulfa drugs in ethylene glycol (car cooling system liquid-highly poisonous). This elixir was used on a ten-year-old boy, who died due to the poison. The other item he mentioned was an inspector at a tuna-canning manufacturer observed how some decomposed sections of the fish were slowly incorporated into the final canned product. It is a shame that these highly guarded human health districts have been closed. This is why this book came about.

h2o just add water interview: Intercultural Postgraduate Supervision Catherine Manathunga, 2014-06-27 The impact of globalisation and aggressive marketing by universities has increased the flow of international or culturally diverse students enrolling in postgraduate research degree programs outside their own countries. As access to postgraduate education widens, more local culturally diverse and Indigenous students are also enrolling in higher degree studies. As a result, significantly more academics now engage in intercultural supervision or supervising students who are culturally different to themselves. This book argues that empowering intercultural supervision can result from more nuanced, critical and theoretically-based understandings of time, place and knowledge. It shows how a range of 'Southern' theories (including postcolonial, Indigenous, feminist, social and cultural geography theories) about history, geography and knowledge can offer fresh insights into intercultural supervision. The author suggests that by using the conceptual tools offered by these Southern theories, the more complex but potentially rich aspects of intercultural supervision can be better understood and grappled with. In particular, these theories enable us to challenge assumptions about the universality and timelessness of Northern knowledge, and to create space for the recovery and further development of Southern, Eastern and Indigenous knowledges within intercultural supervision. This book will be of value to academic supervisors and postgraduate students, especially those engaged in intercultural supervision, as well as researchers and scholars in the field of higher education.
