Kalergis, Longxiang Su, Abdallah Samy, Zhongheng Zhang, 2023-04-25 Volume I.C An outbreak of a respiratory disease first reported in Wuhan, China in December 2019 and the causative agent was discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly disseminated worldwide, with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2%. Person to person transmission is occurring both in the community and healthcare settings. The World Health Organization (WHO) has recently declared the COVID-19 epidemic a public health emergency of international concern. The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis, risk factors for infection, natural history of disease including clinical presentation and outcomes, prognostic factors for severe illness, period of infectivity, modes and extent of virus inter-human transmission, as well as effective preventive measures and public health response and containment interventions. There are no antiviral treatment nor vaccine available but fast track research and development efforts including clinical therapeutic trials are

ongoing across the world. Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff, including clinical, laboratory, managerial and epidemiological data analysis and risk assessment experts. It presents challenges around public communication and messaging around risk, with the potential for misinformation and disinformation. Therefore, integrated operational research and intervention, learning from experiences across different fields and settings should contribute towards better understanding and managing COVID-19. This Research Topic aims to highlight interdisciplinary research approaches deployed during the COVID-19 epidemic, addressing knowledge gaps and generating evidence for its improved management and control. It will incorporate critical, theoretically informed and empirically grounded original research contributions using diverse approaches, experimental, observational and intervention studies, conceptual framing, expert opinions and reviews from across the world. The Research Topic proposes a multi-dimensional approach to improving the management of COVID-19 with scientific contributions from all areas of virology, immunology, clinical microbiology, epidemiology, therapeutics, communications as well as infection prevention and public health risk assessment and management studies.

The 1918 Spanish Flu with no vaccine to protect against the infection and no antibiotics to treat secondary bacterial infections associated with influenza infections, control efforts worldwide were limited to non-pharmaceutical interventions including, isolation, quarantine, good personal hygiene, use of disinfectants, and limitations of public gatherings, which were applied unevenly. These same measures hold good for the Covid-19 pandemic today. Nutraceuticals and Functional Foods for many reasons, primarily their perceived safety, have gained popularity in disease prevention. Also, in the last 2-3 decades there have been well-designed and controlled basic and clinical investigations that have steadily added credence to nutraceuticals for disease prevention. This book is a compilation of reviews of data on different nutraceuticals that may be of relevance to the Covid-19 pandemic. These include probiotics, melatonin, plant bioactive, lipoic acid, curcumin, selenium, zinc, magnesium, and boron to name some.

pn pharmacology online practice 2020 a: *Medicine Across Borders: Exploration of Grey Zones* Susanne Lundin, Rui Liu, Elmi Muller, Anja Smith, 2023-11-15 *Medicine Across Borders* provides an interdisciplinary space to discuss the issue of substandard and falsified medical products. Scholars from social and medical sciences collaboratively contribute insight to improving safe medicine access. The circulation of medicines and medical products on the informal market is well-known. Stakeholders, including governmental agencies and biotechnic enterprises, invest much effort in designing and implementing macrolevel interventions to limit the spread of such products. Nevertheless, there is a lack of knowledge and understanding of how informal markets function in everyday medicine access and use. This applies to professionals within and beyond academia, state

governments, as well as the general public. This book takes an international perspective, examining the issue of substandard and falsified medical products cross nationally. Falsified and poor-quality medicines are prevalent in low- and middle-income countries, but this book also includes research from high-income countries arguing that they too have vulnerabilities, and emphasising the need for vigilance even in well-resourced and well-regulated regimes. *Medicine Across Borders: Exploration of Grey Zones* provides an interdisciplinary space for a depth and diversity of material that spotlights some contemporary themes hindering access to essential medicines and driving the penetration of substandard and falsified medical products. The authors are drawn from a range of academic disciplines across the social and medical sciences presenting findings from data collected using an eclectic mix of methods and analysis. Surveys, ethnography, narrative case studies, statistical, and thematic analysis are all deployed.

pn pharmacology online practice 2020 a: Diabetic Kidney Disease: Routes to drug development, pharmacology and underlying molecular mechanisms, volume II Swayam Prakash Srivastava, Divya Bhatia, 2025-05-07 This exciting Research Topic is the second volume of the Research Topic Diabetic Kidney Disease: Routes to drug development, pharmacology and underlying molecular mechanisms. Please see the first volume here. Diabetic kidney disease is a leading cause of end-stage renal disease which affects one third of the total diabetic patients worldwide. Diabetic kidney disease is also one of the significant long-term complications in terms of morbidity and mortality for individuals with diabetes. A serious knowledge gap exists between biology and drug development which contributes to the suboptimal treatment options against diabetic nephropathy. An increased understanding of diabetic kidney disease is urgently needed for the development of novel therapeutics that can be targeted to the early stages of these diseases. Currently approved therapeutic regimens can slow down, but not prevent the progression of end-stage kidney disease, and are associated with side effects and intolerance. Thus, there is a clear need for new therapeutic strategies to improve renal function in diabetic patients.
