pearson human anatomy and physiology 11th edition: The Living Signature: The Body's Power to Heal and the Question of Design Dr. Octavian Caius Obeada, 2025-06-26 In *The Living Signature: The Body's Power to Heal and the Question of Design*, science and spirit converge in a captivating exploration of the human body as more than mere biology. Drawing from philosophy, theology, medicine, and biology, this book challenges the view that life is the product of blind chance. From the cellular dance of regeneration to the breathtaking orchestration of body systems, it reveals signs of purpose woven into the fabric of life itself. For the scientist, the skeptic, and the seeker alike, this is an invitation to see the body not just as alive, but as alive with meaning. I will praise thee, for I am fearfully and wonderfully made, wrote a grateful King David in Psalm 139 three thousand years ago. He didn't know the half of it. In this marvelous book, Dr. Octavian Caius Obeada focuses on the marvelous ability of life to regenerate and heal itself, surveying what philosophers and theologians throughout the ages have surmised, and detailing the intricate molecular mechanisms that have been discovered by scientists only in recent decades. The result is a tour de force showcasing the intelligent design of life. Michael J. Behe, PhD, Professor of Biological Sciences at Lehigh University in Pennsylvania and a Senior Fellow at Discovery Institute's Center for Science and Culture, and author of *Darwin's Black Box*. *The Living Signature* by Dr. Octavian Caius Obeada is a profound exploration of the human body's regenerative capacity, framed as both a scientific marvel and a philosophical clue to purposeful design. Drawing on decades of medical experience and insights from biology, theology, and systems thinking, the book challenges reductionist views by asking whether healing is merely mechanical, or a message of intention. With compelling case studies and a multidisciplinary lens, this work invites readers to see the human body not as an accident, but as a living signature of meaning and design. Adrian Anthony Dormans MD, FAAFP From skin and bone to organs and DNA, the regenerative capabilities of the human body are not only astonishing, they hint at something deeper. *The Living Signature* lays out thoughtful, well-researched reflections, and challenges you to consider whether the complexity and order we see in ourselves, could truly be the product of blind chance, or the body itself is whispering something about its origin, a message not of randomness, but of meaning. pearson human anatomy and physiology 11th edition: The Right Sensory Mix Diana Derval, 2022-04-08 Many companies fail to acknowledge and analyze disparities observed among customers and simply put them down to culture or emotion. New neuroendocrinological research proves that people are rational: They just have a different biological perception of the same stimulus. Their preferences, behavior, and decisions are strongly influenced by the hundreds of millions of sensors monitoring their body and brain. People with more taste buds are, for example, sensitive to bitterness and are more likely to drink their coffee with sugar or milk, or to drink tea. This book helps product managers, marketers, and corporate decision-makers understand and predict customers' behavior and preferences. It provides the tools to design the right sensory mix (color, shape, depth, taste, smell, texture, and sound) for each product, and fine-tune their positioning and range for every local market. Using cases from different sectors, the author shows that this approach delivers planet and people-friendly innovations which have a higher chance of success in the market.
