university of oxford psychology masters: Invisible Masters Elisabeth Ceppi, 2018-07-03 Invisible Masters rewrites the familiar narrative of the relation between Puritan religious culture and New England's economic culture as a history of the primary discourse that connected them: service. The understanding early Puritans had of themselves as God's servants and earthly masters was shaped by their immersion in an Atlantic culture of service and the worldly pressures and opportunities generated by New England's particular place in it. Concepts of spiritual service and mastery determined Puritan views of the men, women, and children who were servants and slaves in that world. So, too, did these concepts shape the experience of family, labor, law, and economy for those men, women, and children - the very bedrock of their lives. This strikingly original look at Puritan culture will appeal to a wide range of Americanists and historians.

university of oxford psychology masters: Theoretical Approaches to Multi-Cultural Positive Psychological Interventions Llewellyn Ellardus Van Zyl, Sebastiaan Rothmann Sr., 2019-06-11 This volume provides theoretical perspectives on and approaches to the development or enhancement of positive psychological capacities within various multi-cultural professional and organizational contexts. Specifically, it presents theoretical frameworks for the identification, development and optimization of positive psychological capacities through a contemporary, multi-cultural and multi-disciplinary lens. In recent years, the applicability of positive psychological intervention (PPI) techniques has transposed the boundaries of clinical practice into a wide array of complementary domains such as law, education, business and even design sciences such as architecture. These interventions target the enhancement of positive psychological capacities (e.g. strength-identification and use; high-performance learning; appreciative design; job-crafting) in order to not only improve individual functioning, well-being and the treatment of various forms of psychopathology but also to enhance team functioning/performance, organizational growth and community development. Despite its importance, very little research has been done on the design of PPIs applicable to multi-cultural contexts. The contributions to this volume provide insights into this hitherto neglected area of research.

university of oxford psychology masters: Handbook of Categorization in Cognitive Science Henri Cohen, Claire Lefebvre, 2005-10-25 Categorization, the basic cognitive process of arranging objects into categories, is a fundamental process in human and machine intelligence and is central to investigations and research in cognitive science. Until now, categorization has been approached from singular disciplinary perspectives with little overlap or communication between the disciplines involved (Linguistics, Psychology, Philosophy, Neuroscience, Computer Science, Cognitive Anthropology). Henri Cohen and Claire Lefebvre have gathered together a stellar collection of contributors in this unique, ambitious attempt to bring together converging disciplinary and conceptual perspectives on this topic. Categorization is a key concept across the range of cognitive sciences, including linguistics and philosophy, yet hitherto it has been hard to find accounts that go beyond the concerns of one or two individual disciplines. The Handbook of Categorization in Cognitive Science provides just the sort of interdisciplinary approach that is necessary to synthesize knowledge from the different fields and provide the basis for future

innovation.
