****Shiing Shen Chern Selected Papers Volume 4: A Deep Dive into a Mathematical Legacy****

shiing shen chern selected papers volume 4 stands as a critical installment in the collection of works by one of the most influential mathematicians of the 20th century. Shiing-Shen Chern's contributions to differential geometry and topology have shaped modern mathematics in profound ways, and volume 4 of his selected papers offers an insightful glimpse into his continued legacy. For students, researchers, and enthusiasts interested in geometry, topology, and mathematical physics, this volume is a treasure trove of knowledge and inspiration.

Why Shiing Shen Chern's Work Remains Essential

Shiing-Shen Chern revolutionized the way mathematicians view geometric structures by blending classical differential geometry with modern topological methods. His pioneering work on characteristic classes and Chern-Weil theory paved the way for advancements in both pure and applied mathematics. The selected papers compiled in volume 4 highlight some of his later and most refined contributions, demonstrating his continued influence even decades after his initial breakthroughs.

Chern's ability to unify different mathematical areas is evident throughout the volume, making it a must-read not only for those specializing in geometry but also for anyone fascinated by the interconnectedness of mathematical disciplines.

Exploring the Highlights of Shiing Shen Chern Selected Papers Volume 4

Volume 4 of Chern's selected papers delves into complex topics that can sometimes seem daunting but are presented with the clarity and elegance characteristic of Chern's writing. Let's explore some standout themes and ideas within this collection.

The Evolution of Characteristic Classes

One of the cornerstones of Chern's work is the theory of characteristic classes, which link geometric properties of manifolds to algebraic invariants. In this volume, readers will find advanced discussions on the generalizations and applications of characteristic classes.

Chern's insights into how these classes can be used to classify fiber bundles and understand curvature properties remain foundational. The papers include rigorous proofs and innovative perspectives that continue to inspire contemporary research in topology and geometry.

Differential Geometry's Intersection with Physics

Chern's work has also significantly influenced theoretical physics, especially in areas like gauge theory and string theory. Volume 4 contains papers where the interplay between geometry and physics becomes apparent, showcasing how mathematical structures describe physical phenomena.

This intersection is particularly fascinating for those interested in mathematical physics, as Chern's work bridges abstract mathematical concepts with tangible physical interpretations.

Understanding the Mathematical Language and Notation

For readers new to Chern's work, the notation and language may initially seem challenging. However, the selected papers are written in a style that balances technical precision with accessibility. The volume often revisits foundational definitions before advancing into complex theorems, helping readers build their understanding step-by-step.

It's worth noting that familiarity with differential forms, manifolds, and basic algebraic topology will enhance the reading experience. For those less experienced, supplementary texts on these topics can provide valuable background.

How Shiing Shen Chern Selected Papers Volume 4 Enhances Mathematical Research

This volume is not just a historical document but a living resource that continues to influence ongoing research. Here's how it adds value to the mathematical community:

- **Inspiration for New Theories:** The innovative approaches and open questions presented encourage mathematicians to explore fresh avenues.
- **Bridging Disciplines:** By highlighting connections between geometry, topology, and physics, it fosters interdisciplinary collaboration.
- **Educational Resource:** Graduate students and educators find these papers invaluable for advanced courses in geometry and topology.
- **Reference for Advanced Proofs:** Researchers often refer to Chern's meticulous proofs to support or extend their own work.

Tips for Getting the Most Out of the Volume

Given the complexity of the material, approaching this volume with a strategic mindset can enhance

comprehension and retention.

1. ****Start with Background Reading:**** Refresh your knowledge on differential geometry and topology to follow the arguments smoothly.
2. ****Take Notes on Key Concepts:**** Jot down definitions, theorems, and examples to build a personal glossary.
3. ****Work Through Examples:**** Whenever possible, try to replicate proofs or computations to deepen understanding.
4. ****Discuss with Peers or Mentors:**** Collaborative study can illuminate challenging parts and provide diverse perspectives.
5. ****Use Supplementary Materials:**** Reference textbooks or lectures that explain Chern classes and related topics in more detail.

The Legacy of Shiing Shen Chern Through His Selected Papers

Shiing-Shen Chern's influence extends beyond the pages of his selected papers. His work laid the groundwork for modern differential geometry and has applications reaching into complex analysis, algebraic geometry, and theoretical physics. Volume 4, in particular, captures the maturity of his thought and the refinement of his ideas over a lifetime of scholarship.

For anyone passionate about understanding the beauty and depth of mathematical structures, engaging with this volume is both a challenge and a rewarding journey. It invites readers to appreciate the elegance of mathematical reasoning and to witness firsthand the evolution of ideas that continue to shape the landscape of mathematics.

Final Thoughts on Shiing Shen Chern Selected Papers Volume 4

Diving into **shiing shen chern selected papers volume 4** is like embarking on an intellectual voyage through some of the most important concepts in modern mathematics. It's a collection that not only honors Chern's monumental contributions but also inspires new generations to explore and expand upon his ideas.

Whether you are a seasoned mathematician or an enthusiastic learner, this volume offers a rich, engaging experience that brings to life the profound insights of a true mathematical pioneer.

Frequently Asked Questions

What is 'Shiing Shen Chern Selected Papers Volume 4' about?

'Shiing Shen Chern Selected Papers Volume 4' is a collection of important research papers by the renowned mathematician Shiing-Shen Chern, focusing on differential geometry and related mathematical fields.

Who was Shiing-Shen Chern and why are his selected papers significant?

Shiing-Shen Chern was a prominent 20th-century mathematician known for his foundational contributions to differential geometry. His selected papers compile his influential work that has shaped modern geometry and topology.

What topics are covered in Volume 4 of Shiing-Shen Chern's selected papers?

Volume 4 typically includes papers on complex geometry, characteristic classes, fiber bundles, and further developments in differential geometry, reflecting Chern's later research contributions.

Where can I find or purchase 'Shiing Shen Chern Selected Papers Volume 4'?

'Shiing Shen Chern Selected Papers Volume 4' can be purchased through academic publishers such as World Scientific, major online bookstores like Amazon, or accessed via university libraries.

Is 'Shiing Shen Chern Selected Papers Volume 4' suitable for beginners in differential geometry?

The volume is primarily intended for advanced students and researchers with a solid background in differential geometry and related mathematical fields, rather than beginners.

How does Volume 4 of Shiing-Shen Chern's selected papers contribute to modern mathematics?

Volume 4 highlights Chern's later research that continues to influence modern studies in geometry, topology, and mathematical physics, providing deep insights and methods used in contemporary research.

Are there any reviews or summaries available for 'Shiing Shen Chern Selected Papers Volume 4'?

Yes, academic journals and mathematical review platforms such as MathSciNet often provide detailed reviews and summaries of the volume, which can help readers understand its content and significance.

****Shiing Shen Chern Selected Papers Volume 4: A Deep Dive into Mathematical Legacy****

shiing shen chern selected papers volume 4 represents a significant compilation in the realm of differential geometry and global analysis, showcasing the profound contributions of one of the 20th century's most influential mathematicians. Shiing Shen Chern's work has long been celebrated for its depth, elegance, and foundational impact on modern geometry. This fourth volume of his selected papers offers both researchers and enthusiasts a focused glimpse into the evolution of his ideas and the enduring relevance of his mathematical insights.

The publication of ***Shiing Shen Chern Selected Papers Volume 4*** continues a tradition of curating the mathematician's pivotal research, bridging earlier discoveries with contemporary developments. It stands not only as a testament to Chern's genius but also as a vital resource for ongoing studies in differential geometry, topology, and related fields. This article explores the content, significance, and scholarly impact of this volume, highlighting why it remains a crucial reference in mathematical literature.

Contextualizing Shiing Shen Chern's Contributions

Shiing Shen Chern's mathematical journey is marked by landmark achievements, most notably in the formulation of Chern classes, which revolutionized the study of vector bundles and characteristic classes. Across his career, Chern's research expanded into complex manifolds, fiber bundles, and global analysis, influencing diverse areas such as theoretical physics and algebraic geometry.

The ***Selected Papers Volume 4*** encapsulates a later phase of his work, often characterized by an integration of abstract differential geometry concepts with concrete applications. This volume is critical because it sheds light on how Chern's earlier theories matured and adapted, offering fresh perspectives and novel results that have shaped subsequent research trajectories.

Scope and Content of Volume 4

Delving into ***shiing shen chern selected papers volume 4*** reveals a carefully curated set of papers that focus on advanced topics such as:

- Characteristic classes and their generalizations
- Applications of differential geometry in topology and global analysis
- Innovations in complex geometry and connections on fiber bundles

- Explorations of geometric invariants and their computational techniques

Each paper within the volume provides rigorous proofs, detailed expositions, and often, new theoretical frameworks that extend classical understanding. Readers will find detailed discussions on the interplay between curvature, topology, and global geometric structures—areas where Chern's influence remains unparalleled.

Comparisons with Previous Volumes

When compared to earlier volumes in the *Shiing Shen Chern Selected Papers* series, Volume 4 tends to emphasize the synthesis and application of previously established theories rather than the foundational introductions found in Volume 1 or 2. While the first volumes laid the groundwork with pioneering concepts such as Chern-Weil theory, Volume 4 often focuses on refining these ideas and exploring their implications in more specialized contexts.

This progression illustrates Chern's intellectual trajectory—from foundational discoveries to nuanced explorations—making Volume 4 particularly appealing for mathematicians interested in both the historical development and modern applications of his work.

Impact on Contemporary Mathematics and Research

The relevance of *Shiing Shen Chern Selected Papers Volume 4* extends far beyond historical interest. Modern geometers and topologists frequently refer to Chern's insights when tackling complex problems related to characteristic classes, index theory, and geometric structures on manifolds. The theoretical frameworks articulated in this volume have been instrumental in advancing fields such as:

- String theory and mathematical physics, where fiber bundles and curvature play crucial roles
- Algebraic geometry, particularly in studying vector bundles over complex varieties
- Differential topology, including the classification of smooth manifolds using geometric invariants

Moreover, the volume's rigorous approach and comprehensive proofs serve as an educational foundation for graduate students and researchers seeking a deeper understanding of differential geometry's core principles.

Strengths of the Volume

- **Comprehensive Representation:** The volume captures a wide spectrum of Chern's later research, providing a holistic view of his contributions during a mature phase of his career.
- **Clarity and Rigor:** Despite the complexity of the topics, the papers maintain a high standard of mathematical rigor combined with clear expositions.
- **Relevance to Modern Research:** Many of the results continue to underpin contemporary investigations, ensuring the volume's ongoing utility.

Potential Limitations

While **Shiing Shen Chern Selected Papers Volume 4** is invaluable for specialists, its advanced and abstract nature may pose accessibility challenges for newcomers to the field. Readers without a solid background in differential geometry and topology might find certain sections dense, necessitating supplementary study or guidance.

How Volume 4 Integrates with Broader Mathematical Literature

The integration of **shiing shen chern selected papers volume 4** into the broader corpus of mathematical literature is seamless, given that many of the concepts introduced or refined by Chern have become standard tools in geometry and topology. The volume acts as both a historical archive and a living document that continues to inspire research.

In academic libraries and research institutions, Volume 4 complements other foundational texts such as:

- "Foundations of Differential Geometry" by Kobayashi and Nomizu
- "Characteristic Classes" by Milnor and Stasheff
- Contemporary journals focusing on geometric analysis and global differential geometry

This interconnectedness underscores the volume's role in a continuous dialogue within the mathematical

community, linking past insights with future innovations.

Influence on Educational Curricula and Research Methodologies

In advanced mathematics programs, particularly those emphasizing geometry and topology, *Shiing Shen Chern Selected Papers Volume 4* often serves as a supplementary resource. Its detailed proofs and conceptual clarity help cultivate critical thinking and a nuanced understanding of geometric phenomena.

Researchers frequently cite this volume when developing new theories or exploring complex geometric structures, demonstrating its enduring methodological influence. The volume's inclusion in academic discourse affirms Chern's stature as a cornerstone figure in the field.

By providing a focused collection of Shiing Shen Chern's mature works, *Selected Papers Volume 4* enriches the mathematical landscape, offering both a retrospective and a springboard for future discovery. The enduring applicability and intellectual rigor of this volume underscore why it remains an essential element in the study of differential geometry and beyond.

shiing shen chern selected papers volume 4: *Selected Papers* Shiing-Shen Chern, 1978 In recognition of professor Shiing-Shen Chern's long and distinguished service to mathematics and to the University of California, the geometers at Berkeley held an International Symposium in Global Analysis and Global Geometry in his honor in June 1979. The output of this Symposium was published in a series of three separate volumes, comprising approximately a third of Professor Chern's total publications up to 1979. Later, a fourth volume was published, focusing on papers written during the Eighties. This second volume comprises selected papers written between 1932 and 1965.

shiing shen chern selected papers volume 4: Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07 This volume is about the life and work of Shiing-Shen Chern (1911-), one of the leading mathematicians of this century. The book contains personal accounts by some friends, together with a summary of the mathematical works by Chern himself. Besides a selection of the mathematical papers the book also contains all his papers published after 1988.

shiing shen chern selected papers volume 4: Lectures on Differential Geometry Shiing-Shen

Chern, Weihuan Chen, Kai Shue Lam, 1999 This book is a translation of an authoritative introductory text based on a lecture series delivered by the renowned differential geometer, Professor S S Chern in Beijing University in 1980. The original Chinese text, authored by Professor Chern and Professor Wei-Huan Chen, was a unique contribution to the mathematics literature, combining simplicity and economy of approach with depth of contents. The present translation is aimed at a wide audience, including (but not limited to) advanced undergraduate and graduate students in mathematics, as well as physicists interested in the diverse applications of differential geometry to physics. In addition to a thorough treatment of the fundamentals of manifold theory, exterior algebra, the exterior calculus, connections on fiber bundles, Riemannian geometry, Lie groups and moving frames, and complex manifolds (with a succinct introduction to the theory of Chern classes), and an appendix on the relationship between differential geometry and theoretical physics, this book includes a new chapter on Finsler geometry and a new appendix on the history and recent developments of differential geometry, the latter prepared specially for this edition by Professor Chern to bring the text into perspectives.

shiing shen chern selected papers volume 4: Inspired By S S Chern: A Memorial Volume In Honor Of A Great Mathematician Phillip A Griffiths, 2006-11-27 Shiing-Shen Chern

(1911-2004) was one of the leading differential geometers of the twentieth century. In 1946, he founded the Mathematical Institute of Academia Sinica in Shanghai, which was later moved to Nanking. In 1981, he founded the Mathematical Sciences Research Institute (MSRI) at Berkeley and acted as the director until 1984. In 1985, he founded the Nankai Institute of Mathematics in Tianjin. He was awarded the National Medal of Science in 1975; the Wolf Prize in mathematics in 1984; and the Shaw Prize in mathematical sciences in 2004. Chern's works span all the classic fields of differential geometry: the Chern-Simons theory; the Chern-Weil theory, linking curvature invariants to characteristic classes; Chern classes; and other areas such as projective differential geometry and webs that are mathematically rich but currently have a lower profile. He also published work in integral geometry, value distribution theory of holomorphic functions, and minimal submanifolds. Inspired by Chern and his work, former colleagues, students and friends — themselves highly regarded mathematicians in their own right — come together to honor and celebrate Chern's huge contributions. The volume, organized by Phillip Griffiths of the Institute for Advanced Study (Princeton), contains contributions by Michael Atiyah (University of Edinburgh), C-M Bai (Nankai), Robert Bryant (Duke University), Kung-Ching Chang (Peking University), Jeff Cheeger (New York University), Simon K Donaldson (Imperial College), Hélène Esnault (Universität Duisburg-Essen), Mo-Lin Ge (Nankai), Mark Green (University of California at Los Angeles), Phillip Griffiths (Institute for Advanced Study), F Reese Harvey (Rice University), Alain Hénaut (Université Bordeaux 1), Niky Kamran (McGill University), Bruce Kleiner (Yale), H Blaine Lawson, Jr (SUNY at Stony Brook), Yiming Long (Nankai), Xiaonan Ma (UMR 7640 du CNRS), Luc Pirio (IRMAR, France), Graeme Segal (Oxford), Gang Tian (MIT), Jean-Marie Trepreau (Institut de Mathématiques de Jussieu), Jeff Viaclovsky (MIT), Wei Wang (Nankai), Wentsun Wu (Chinese Academy of Sciences), C N Yang (Tsinghua), Tan Zhang (Murray State University), Weiping Zhang (Nankai) and others.

shiing shen chern selected papers volume 4: Meeting under the Integral Sign?: The Oslo Congress of Mathematicians on the Eve of the Second World War Christopher D. Hollings, Reinhard Siegmund-Schultze, 2020-04-08 This book examines the historically unique conditions under which the International Congress of Mathematicians took place in Oslo in 1936. This Congress was the only one on this level to be held during the period of the Nazi regime in Germany (1933–1945) and after the wave of emigrations from it. Relying heavily on unpublished archival sources, the authors consider the different goals of the various participants in the Congress, most notably those of the Norwegian organizers, and the Nazi-led German delegation. They also investigate the reasons for the absence of the proposed Soviet and Italian delegations. In addition, aiming to shed light onto the mathematical dimension of the Congress, the authors provide overviews of the nineteen plenary presentations, as well as their planning and development. Biographical information about each of the plenary speakers rounds off the picture. The Oslo Congress, the first at which Fields Medals were awarded, is used as a lens through which the reader of this book can view the state of the art of mathematics in the mid-1930s.

shiing shen chern selected papers volume 4: Wolf Prize in Mathematics Shiing-Shen Chern, Friedrich Hirzebruch, 2000 This invaluable book features bibliographies, important papers, and speeches (for example at international congresses) of Wolf Prize winners. This is the first time that lectures by some Wolf Prize winners have been published together. Since the work of the Wolf laureates covers a wide spectrum, much of the mathematics of the twentieth century comes to life in this book.

shiing shen chern selected papers volume 4: Selected Papers I Shiing-shen Chern, 1978-12-09 In recognition of professor Shiing-Shen Chern's long and distinguished service to mathematics and to the University of California, the geometers at Berkeley held an International Symposium in Global Analysis and Global Geometry in his honor in June 1979. The output of this Symposium was published in a series of three separate volumes, comprising approximately a third of Professor Chern's total publications up to 1979. In making the selections, Professor Chern gave preference to shorter and lesser-known papers.

shiing shen chern selected papers volume 4: Circles, Spheres and Spherical Geometry Hiroshi Maehara, Horst Martini, 2024-08-09 This textbook focuses on the geometry of circles, spheres, and spherical geometry. Various classic themes are used as introductory and motivating topics. The book begins very simply for the reader in the first chapter discussing the notions of inversion and stereographic projection. Here, various classical topics and theorems such as Steiner circles, inversion, Soddy's hexlet, stereographic projection and Poncelet's porism are discussed. The book then delves into Bend formulas and the relation of radii of circles, focusing on Steiner circles, mutually tangent four circles in the plane and other related notions. Next, some fundamental concepts of graph theory are explained. The book then proceeds to explore orthogonal-cycle representation of quadrangulations, giving detailed discussions of the Brightwell-Scheinerman theorem (an extension of the Koebe-Andreev-Thurston theorem), Newton's 13-balls-problem, Casey's theorem (an extension of Ptolemy's theorem) and its generalizations. The remainder of the book is devoted to spherical geometry including a chapter focusing on geometric probability on the sphere. The book also contains new results of the authors and insightful notes on the existing literature, bringing the reader closer to the research front. Each chapter concludes with related exercises of varying levels of difficulty. Solutions to selected exercises are provided. This book is suitable to be used as textbook for a geometry course or alternatively as basis for a seminar for both advanced undergraduate and graduate students alike.

shiing shen chern selected papers volume 4: Modeling in Mathematics Johan Gielis, Paolo

Emilio Ricci, Ilia Tavkhelidze, 2017-04-20 This book contains a collection of papers presented at the 2nd Tbilisi Salerno Workshop on Mathematical Modeling in March 2015. The focus is on applications of mathematics in physics, electromagnetics, biochemistry and botany, and covers such topics as multimodal logic, fractional calculus, special functions, Fourier-like solutions for PDE's, Rvachev-functions and linear dynamical systems. Special chapters focus on recent uniform analytic descriptions of natural and abstract shapes using the Gielis Formula. The book is intended for a wide audience with interest in application of mathematics to modeling in the natural sciences.

shiing shen chern selected papers volume 4: The Collected Papers of Wei-Liang Chow
 Shiing-Shen Chern, 2002 This invaluable book contains the collected papers of Prof Wei-Liang Chow, an original and versatile mathematician of the 20th Century. Prof Chow's name has become a household word in mathematics because of the Chow ring, Chow coordinates, and Chow's theorem on analytic sets in projective spaces. The Chow ring has many advantages and is widely used in intersection theory of algebraic geometry. Chow coordinates have been a very versatile tool in many aspects of algebraic geometry. Chow's theorem OCo that a compact analytic variety in a projective space is algebraic OCo is justly famous; it shows the close analogy between algebraic geometry and algebraic number theory. About Professor Wei-Liang Chow The long and distinguished career of Prof Wei-Liang Chow (1911 OCo 95) as a mathematician began in China with professorships at the National Central University in Nanking (1936 OCo 37) and the National Tung-Chi University in Shanghai (1946 OCo 47), and ultimately led him to the United States, where he joined the mathematics faculty of Johns Hopkins University in Baltimore, Maryland, first as an associate professor from 1948 to 1950, then as a full professor from 1950 until his retirement in 1977. In addition to serving as chairman of the mathematics department at Johns Hopkins from 1955 to 1965, he was Editor-in-Chief of the American Journal of Mathematics from 1953 to 1977.

During the period of 1935-1943, Prof Hsiung was in China working on projective differential geometry under Prof Buchin Su. In 1946, he went to the United States, where he gradually shifted to global problems. Altogether Prof Hsiung has published about 100 research papers, from which he has selected 64 (in chronological order) for this volume.

shiing shen chern selected papers volume 4: Riemann-Finsler Geometry Shiing-Shen Chern, Zhongmin Shen, 2005 Riemann-Finsler geometry is a subject that concerns manifolds with Finsler metrics, including Riemannian metrics. It has applications in many fields of the natural sciences. Curvature is the central concept in Riemann-Finsler geometry. This invaluable textbook presents detailed discussions on important curvatures such the Cartan torsion, the S-curvature, the Landsberg curvature and the Riemann curvature. It also deals with Finsler metrics with special

curvature or geodesic properties, such as projectively flat Finsler metrics, Berwald metrics, Finsler metrics of scalar curvature or isotropic S-curvature, etc. Instructive examples are given in abundance, for further description of some important geometric concepts. The text includes the most recent results, although many of the problems discussed are classical. Graduate students and researchers in differential geometry.

shiing shen chern selected papers volume 4: Complex Geometry and Lie Theory James A. Carlson, Charles Herbert Clemens, David R. Morrison, 1991 In the late 1960s and early 1970s, Phillip Griffiths and his collaborators undertook a study of period mappings and variation of Hodge structure. The motivating problems, which centered on the understanding of algebraic varieties and the algebraic cycles on them, came from algebraic geometry. However, the techniques used were transcendental in nature, drawing heavily on both Lie theory and hermitian differential geometry. Promising approaches were formulated to fundamental questions in the theory of algebraic curves, moduli theory, and the deep interaction between Hodge theory and algebraic cycles. Rapid progress on many fronts was made in the 1970s and 1980s, including the discovery of important connections to other fields, including Nevanlinna theory, integrable systems, rational homotopy theory, harmonic mappings, intersection cohomology, and superstring theory. This volume contains thirteen papers presented during the Symposium on Complex Geometry and Lie Theory held in Sundance, Utah in May 1989. The symposium was designed to review twenty years of interaction between these two fields, concentrating on their links with Hodge theory. The organizers felt that the time was right to examine once again the large issues of understanding the moduli and cycle theory of higher-dimensional varieties, which was the starting point of these developments. The breadth of this collection of papers indicates the continuing growth and vitality of this area of research. Several survey papers are included, which should make the book a valuable resource for graduate students and other researchers who wish to learn about the field. With contributions from some of the field's top researchers, this volume testifies to the breadth and vitality of this area of research.

shiing shen chern selected papers volume 4: *Proceedings of the Fourth International Congress on Mathematical Education* M. Zweng, Green, Kilpatrick, Pollack, Suydam, 2012-12-06 Henry O. Pollak Chairman of the International Program Committee Bell Laboratories Murray Hill, New Jersey, USA The Fourth International Congress on Mathematics Education was held in Berkeley, California, USA, August 10-16, 1980. Previous Congresses were held in Lyons in 1969, Exeter in 1972, and Karlsruhe in 1976. Attendance at Berkeley was about 1800 full and 500 associate members from about 90 countries; at least half of these come from outside of North America. About 450 persons participated in the program either as speakers or as presiders; approximately 40 percent of these came from the U.S. or Canada. There were four plenary addresses; they were delivered by Hans Freudenthal on major problems of mathematics education, Hermina Sinclair on the relationship between the learning of language and of mathematics, Seymour Papert on the computer as carrier of mathematical culture, and Hua Loo-Keng on popularising and applying mathematical methods. George Polya was the honorary president of the Congress; illness prevented his planned attendance but he sent a brief presentation entitled, *Mathematics Improves the Mind*. There was a full program of speakers, panelists, debates, miniconferences, and meetings of working and study groups. In addition, 18 major projects from around the world were invited to make presentations, and various groups representing special areas of concern had the opportunity to meet and to plan their future activities.

shiing shen chern selected papers volume 4: *Finsler Geometry* David Dai-Wai Bao, Shiing-Shen Chern, Zhongmin Shen, 1996 This volume features proceedings from the 1995 Joint Summer Research Conference on Finsler Geometry, chaired by S. S. Chern and co-chaired by D. Bao and Z. Shen. The editors of this volume have provided comprehensive and informative capsules of presentations and technical reports. This was facilitated by classifying the papers into the following 6 separate sections - 3 of which are applied and 3 are pure: * Finsler Geometry over the reals * Complex Finsler geometry * Generalized Finsler metrics * Applications to biology, engineering, and physics * Applications to control theory * Applications to relativistic field theory Each section

contains a preface that provides a coherent overview of the topic and includes an outline of the current directions of research and new perspectives. A short list of open problems concludes each contributed paper. A number of photos are featured in the volumes, for example, that of Finsler. In addition, conference participants are also highlighted.
