Buprenorphine Training for Nurse Practitioners: Empowering Care in Opioid Use Disorder Treatment

buprenorphine training for nurse practitioners is becoming an essential component of modern healthcare, particularly as the opioid crisis continues to challenge medical professionals across the United States. Nurse practitioners (NPs) play a critical role in expanding access to medication-assisted treatment (MAT) for patients struggling with opioid use disorder (OUD). This specialized training not only equips NPs with the necessary skills to safely prescribe buprenorphine but also enhances their confidence in managing complex addiction cases within diverse clinical settings.

Understanding the Importance of Buprenorphine Training for Nurse Practitioners

The opioid epidemic has necessitated a shift in how healthcare providers approach addiction treatment. Buprenorphine, a partial opioid agonist, is a cornerstone of MAT due to its effectiveness in reducing withdrawal symptoms and cravings without producing the same euphoric effects as full opioid agonists. However, prescribing buprenorphine requires clinicians to undergo specific training and obtain a waiver under the Drug Addiction Treatment Act of 2000 (DATA 2000).

For nurse practitioners, completing buprenorphine training is more than a regulatory step—it is an opportunity to deepen their understanding of addiction medicine and to contribute meaningfully to a pressing public health issue. This training helps NPs recognize the nuances of OUD, navigate legal and ethical considerations, and optimize patient outcomes through evidence-based care.

The Structure and Content of Buprenorphine Training for Nurse Practitioners

Buprenorphine training programs for nurse practitioners are designed to be comprehensive yet

practical, ensuring that participants acquire both theoretical knowledge and clinical skills. These trainings typically cover:

1. Pharmacology and Mechanism of Action

Understanding how buprenorphine works is fundamental. Training explores its partial agonist properties, ceiling effect on respiratory depression, and how it differs from other opioids. This section also discusses the advantages of buprenorphine in reducing overdose risk compared to methadone or full opioid agonists.

2. Patient Assessment and Diagnosis

Nurse practitioners learn to conduct thorough assessments to identify patients suitable for buprenorphine treatment. This includes screening for opioid use disorder using standardized tools, evaluating co-occurring mental health conditions, and understanding contraindications.

3. Induction, Stabilization, and Maintenance

Training details the protocols for initiating buprenorphine therapy, managing withdrawal symptoms, and adjusting dosages for stabilization. NPs also learn strategies for maintaining treatment adherence and preventing relapse.

4. Legal and Regulatory Guidelines

Because prescribing buprenorphine involves compliance with federal and state regulations, the training covers waiver requirements, documentation, confidentiality under 42 CFR Part 2, and prescribing limits.

5. Addressing Barriers and Stigma

An important part of training focuses on understanding and overcoming stigma related to addiction treatment, both from healthcare providers and patients. This helps NPs create a supportive environment that encourages patient engagement.

Benefits for Nurse Practitioners Completing Buprenorphine Training

Completing buprenorphine training empowers nurse practitioners with several professional and clinical advantages:

- **Expanded Scope of Practice:** Obtaining the waiver allows NPs to prescribe buprenorphine independently, broadening their treatment capabilities.
- **Improved Patient Outcomes:** Knowledge gained from training enables NPs to offer comprehensive care that addresses the multifaceted nature of OUD.
- **Enhanced Confidence:** Training reduces uncertainty and increases confidence when managing complex addiction cases.
- **Contribution to Public Health:** By providing MAT, NPs play a critical role in curbing the opioid epidemic and saving lives.
- **Professional Development:** Specialized training can lead to new career opportunities and recognition in addiction medicine.

How to Access Buprenorphine Training for Nurse Practitioners

There are numerous pathways for nurse practitioners interested in buprenorphine training:

Online Courses

Many organizations offer flexible, online training modules that allow NPs to complete the required education at their own pace. These courses often include interactive content, case studies, and quizzes to reinforce learning.

In-Person Workshops

Some healthcare institutions and professional associations provide live workshops or seminars. These sessions facilitate peer interaction and hands-on learning experiences, such as role-playing patient interviews.

Continuing Education Providers

Several accredited continuing education providers integrate buprenorphine training into their offerings, allowing NPs to earn necessary CE credits alongside the waiver training.

Steps to Obtain the X-Waiver

Once training is completed, nurse practitioners must apply for the DATA 2000 waiver, often referred to as the X-waiver. The application process requires submitting proof of training and completing registration with the Substance Abuse and Mental Health Services Administration (SAMHSA).

Challenges and Considerations in Buprenorphine Training

While buprenorphine training is invaluable, nurse practitioners should be aware of potential challenges:

- **Time Commitment:** Some trainings require 8 hours or more, which can be difficult to fit into busy schedules.
- **Keeping Up-to-Date:** Guidelines and best practices in addiction treatment evolve, so ongoing education is important.
- **Addressing Stigma:** Despite training, NPs may encounter stigma from colleagues or patients resistant to MAT.
- **Resource Limitations:** Providing MAT effectively often requires access to multidisciplinary teams and support services, which may not be available in all settings.

Tips for Nurse Practitioners Considering Buprenorphine Training

For nurse practitioners embarking on this path, here are some helpful tips:

- **Choose Accredited Training:** Ensure the program is recognized by SAMHSA to qualify for the waiver.
- **Engage with Experienced Providers:** Networking with clinicians already prescribing buprenorphine can provide invaluable practical insights.

- **Leverage Telehealth:** Given the rise of telemedicine, consider how virtual care can expand your ability to reach patients needing MAT.
- **Stay Patient-Centered:** Emphasize empathy and non-judgmental communication to build trust with patients battling OUD.
- **Plan for Ongoing Support:** Connect with addiction specialists, counselors, and social workers to create a comprehensive care approach.

Buprenorphine training for nurse practitioners is more than just a certification—it's a vital step toward addressing one of the most significant public health crises of our time. As NPs become increasingly integral to addiction treatment, their specialized training ensures patients receive compassionate, evidence-based care that can transform lives. Whether through online courses or in-person workshops, acquiring this knowledge empowers nurse practitioners to make a lasting impact in their communities.

Frequently Asked Questions

What is buprenorphine training for nurse practitioners?

Buprenorphine training for nurse practitioners is a specialized educational program designed to equip NPs with the knowledge and skills to safely prescribe buprenorphine for opioid use disorder treatment.

Why is buprenorphine training important for nurse practitioners?

Buprenorphine training is important because it enables nurse practitioners to provide effective medication-assisted treatment (MAT) for patients with opioid use disorder, helping to reduce opioid addiction and overdose rates.

How can nurse practitioners obtain buprenorphine training?

Nurse practitioners can obtain buprenorphine training through accredited online courses, workshops, or programs approved by the Substance Abuse and Mental Health Services Administration (SAMHSA) or other relevant bodies.

Is buprenorphine training mandatory for nurse practitioners to prescribe buprenorphine?

Yes, nurse practitioners must complete specific buprenorphine training and obtain a waiver (DATA 2000 waiver) to legally prescribe buprenorphine for opioid use disorder treatment.

How long does buprenorphine training for nurse practitioners typically take?

The training typically takes 8 hours to complete, although some programs may offer shorter or more flexible formats depending on the provider.

What topics are covered in buprenorphine training for nurse practitioners?

Training usually covers opioid use disorder diagnosis, buprenorphine pharmacology, patient assessment, treatment planning, regulatory requirements, and managing follow-up care.

Are there continuing education credits available for buprenorphine training?

Yes, many buprenorphine training programs offer continuing education units (CEUs) or credits that count towards professional licensure requirements for nurse practitioners.

Can nurse practitioners prescribe buprenorphine without completing training?

No, nurse practitioners must complete the required training and obtain a waiver before they are authorized to prescribe buprenorphine for opioid use disorder.

Where can nurse practitioners find free or low-cost buprenorphine training programs?

Free or low-cost buprenorphine training programs are often available through SAMHSA, state health departments, professional nursing organizations, and some academic institutions.

Buprenorphine Training for Nurse Practitioners: Expanding Access to Opioid Use Disorder Treatment

buprenorphine training for nurse practitioners has become a critical component in addressing the ongoing opioid epidemic, particularly in the United States. As frontline healthcare providers, nurse practitioners (NPs) play a vital role in expanding access to medication-assisted treatment (MAT) for opioid use disorder (OUD). Buprenorphine, a partial opioid agonist, is recognized for its efficacy in reducing opioid cravings and withdrawal symptoms, making it a cornerstone in OUD management. This article explores the nuances of buprenorphine training for nurse practitioners, the regulatory landscape, educational requirements, and its impact on healthcare delivery.

Understanding Buprenorphine and Its Role in OUD Treatment

Buprenorphine is an FDA-approved medication used in MAT programs to treat opioid addiction. Unlike full opioid agonists such as methadone, buprenorphine has a ceiling effect on respiratory depression, reducing the risk of overdose. Its unique pharmacological profile enables it to alleviate withdrawal

symptoms and reduce illicit opioid use while minimizing potential abuse.

With the increasing prevalence of opioid misuse and overdose deaths, healthcare systems have sought to broaden the pool of qualified providers authorized to prescribe buprenorphine. Historically, only physicians with special waiver training under the Drug Addiction Treatment Act of 2000 (DATA 2000) were eligible to prescribe buprenorphine for OUD. However, recent policy changes have expanded prescribing privileges to include nurse practitioners and physician assistants, provided they complete requisite training.

Regulatory Framework and Training Requirements

DATA 2000 Waiver and Nurse Practitioner Eligibility

Under DATA 2000, prescribers must obtain a waiver to prescribe buprenorphine for OUD in outpatient settings. Initially limited to physicians, the Comprehensive Addiction and Recovery Act (CARA) of 2016 allowed nurse practitioners to apply for this waiver. To qualify, NPs must complete specific training hours focused on OUD treatment.

Training Curricula and Content

The buprenorphine training for nurse practitioners typically consists of an 8-hour educational program approved by the Substance Abuse and Mental Health Services Administration (SAMHSA) or equivalent accrediting bodies. The curriculum covers:

- Basics of opioid addiction and neurobiology

- Pharmacology of buprenorphine and other MAT medications
- Clinical assessment and patient selection criteria
- Initiating and managing buprenorphine treatment
- Addressing co-occurring disorders and psychosocial support
- Legal and regulatory considerations in OUD treatment

The training is available through various modalities, including online self-paced courses, live webinars, and in-person workshops, providing flexibility for busy practitioners.

Implications of Buprenorphine Training for Nurse Practitioners

Expanding Access to Treatment

One of the primary benefits of buprenorphine training for nurse practitioners is the expansion of treatment access, especially in underserved and rural areas where physicians may be scarce. NPs often serve as primary care providers in these communities, making their ability to prescribe buprenorphine crucial in mitigating the treatment gap.

Data from the National Institute on Drug Abuse (NIDA) indicate that regions with higher NP involvement in OUD treatment programs witness improved patient outcomes, including reduced overdose rates and increased retention in care.

Challenges and Considerations

Despite the clear advantages, there are challenges associated with buprenorphine training and prescribing by nurse practitioners:

- **Stigma and Misconceptions:** Both providers and patients may harbor biases against MAT, viewing it as substituting one addiction for another.
- **Regulatory Barriers:** Some states impose additional restrictions on NP prescribing authority, which can limit the practical application of training.
- **Integration into Practice:** Incorporating OUD treatment into existing workflows requires coordination with behavioral health services and ongoing patient monitoring.

Addressing these barriers is essential for maximizing the impact of buprenorphine training on public health.

Comparative Analysis: Buprenorphine Training versus Traditional Physician Training

While the core content of buprenorphine training for nurse practitioners aligns with that required for physicians, there are differences in scope and practice:

- **Training Duration:** Physicians typically complete a 24-hour training, whereas NPs are required to complete 8 hours, reflecting differences in baseline medical education.

- **Scope of Practice:** NPs' prescribing capabilities may be subject to state-specific regulations and collaboration agreements, while physicians generally have broader independent authority.
- **Support Systems:** NPs may rely more heavily on multidisciplinary teams for comprehensive OUD care, emphasizing the importance of integrated care models.

These distinctions highlight the need for tailored educational resources and support mechanisms to ensure NPs can effectively manage OUD treatment.

Future Directions and Innovations in Buprenorphine Training

The landscape of buprenorphine training for nurse practitioners is evolving in response to emerging challenges and technological advancements:

Telehealth Integration

The COVID-19 pandemic accelerated the adoption of telehealth for OUD treatment, prompting adaptations in training programs to include telemedicine competencies. This shift enables NPs to reach patients remotely, increasing treatment accessibility.

Enhanced Training Modules

There is growing interest in incorporating simulation-based learning and case studies into training curricula to better prepare NPs for complex clinical scenarios. Additionally, ongoing continuing education opportunities are being developed to update practitioners on best practices and evolving guidelines.

Policy Advocacy and Support

Advocacy efforts continue to focus on removing prescribing barriers and promoting full practice authority for nurse practitioners. Enhanced support from professional organizations and governmental agencies aims to empower NPs in combating the opioid crisis through effective use of buprenorphine.

As the demand for OUD treatment grows, buprenorphine training for nurse practitioners remains a pivotal strategy in expanding the healthcare workforce's capacity to deliver evidence-based care. By fostering comprehensive education and addressing systemic challenges, this training equips nurse practitioners to play an instrumental role in transforming addiction treatment paradigms.

buprenorphine training for nurse practitioners: Use of Medication-Assisted Treatment for Opioid Use Disorder in Criminal Justice Settings ((Evidence-based Resource Guide Series) U.S. Department of Health and Human Services, 2019-11-19 Treatment and recovery of individuals with opioid use disorder (OUD) can vary. These individuals may have co-occurring disorders, live in diverse parts of the country, and face a variety of socio-economic factors that help or hinder their treatment. All these factors bring complexities to evaluating the effectiveness of services, treatments, and supports. Despite variations, substantial evidence is available to understand the types of services, treatments, and supports that reduce substance use, lessen mental health symptoms, and improve individuals' quality of life. Communities are eager to take advantage of what has been learned to help individuals in need.

buprenorphine training for nurse practitioners: Guidelines for Nurse Practitioners in Gynecologic Settings, 12th Edition Heidi Collins Fantasia, Allyssa L. Harris, Holly B. Fontenot, 2020-03-01 Delivers the latest evidence-based guidelines you need to ensure excellence in clinical practice! Now in its 12th edition, this authoritative resource continues to represent the gold standard for nursing management of common gynecological conditions for women throughout the life span. It includes contributions from prominent specialists focusing on specific areas of gynecological health, in addition to the vanguard contributions of three new lead Editors with decades of experience in varied health care settings. The 12th edition is substantially updated with pivotal topics, current evidence-based practice guidelines, real-life case studies, and improved patient teaching materials that foster translation of information to practice. Clinical guidelines, appendices, and bibliographies are extensively revised to reflect the most current evidence-based

information, research, and consensus from national health organizations. For qualified instructor's, new PowerPoint slides and a transition guide for the 12th edition are included for ease of use in educational programs. New and Revised Chapters: New section on women's health: adolescents, sexual and gender minority persons, and individuals with mental health considerations Updated breast and cervical cancer screening guidelines Acute and chronic gynecologic conditions STIs and prevention and management of HPV-associated cancers Perimenopause and postmenopausal care Key Features: Evidence-based guidelines, empirically proven to improve patient outcomes Outline format ensures quick and easy access to essential information Updated bibliography for each guideline, including relevant websites with additional resources Online access to seven appendices presenting updated clinical resources, assessments, and screening tools Two expanded chapters include online access to case studies and EMR education templates to facilitate student learning New PowerPoint slides for ease of use by qualified instructors Transition guide to assist instructors in incorporating new edition content into their courses

buprenorphine training for nurse practitioners: Guidelines for Nurse Practitioners in Gynecologic Settings Heidi Collins Fantasia, Allyssa L. Harris, Holly B. Fontenot, 2024-02-17 A comprehensive, one-stop guide to gynecological health for busy clinicians The 13th edition of this gold standard for the assessment and management of gynecological health is updated with a broad trove of new evidence-based information to promote the highest standards of clinical practice. With contributions from expert practitioner/educators, this edition encompasses key guidelines reflecting the most current best practices, several new or updated chapters, and two features designed to facilitate student learning and enhance primary care---30 case studies with Q&A for 15 chapters and updated education templates for input into electronic health records. Guidelines are organized in concise outline format to promote easy access to commonly occurring gynecologic issues and clinical conditions. In addition to its value for clinicians specializing in the comprehensive care of women and individuals across the lifespan, this resource will be an asset to all graduate nursing programs preparing nurse practitioners in women's and gender-related health. New to the 13th Edition: Extensively revised clinical guidelines and appendices representing the most current evidence-based information from research and national organizations New chapters on care of sexual and gender minority individuals, adolescents, and older women; use of telehealth in gynecologic care; and women-specific pharmacology issues Updated content on substance abuse and misuse and on best practices developed during COVID 19 pandemic Enhanced mental health chapter focusing on pharmacological approaches Updated guidelines for STIs, vaginitis, and vaginosis and prevention and management of HPV-associated cancers with links to ASCCP for ongoing updates Guidelines for addressing vaccine hesitancy Guidelines for care of individuals who have experienced sexual assault Updated information on contraception, hormone therapy, menopause, and osteoporosis Case studies with Q&A to help students/practitioners translate information into practice Updated, customizable education templates for input into electronic health records with lay public-appropriate language Key Features: Evidence-based guidelines empirically proven to boost patient outcomes Outline format ensuring quick and easy access to essential information Online access to appendices presenting updated clinical resources, assessments, and screening tools Online access to case studies and health record education templates to facilitate student learning

buprenorphine training for nurse practitioners: Office-Based Buprenorphine Treatment of Opioid Use Disorder, Second Edition John A. Renner Jr., M.D., Petros Levounis, M.D., M.A., Anna T. LaRose, M.D., 2017-12-05 With a new foreword by Nora Volkow, Director of the National Institute on Drug Abuse, this second edition of Office-Based Buprenorphine Treatment of Opioid Use Disorder provides updated information on evidence-based treatment for opioid use disorder (OUD)-an increasingly important topic as the epidemic of opioid misuse and overdose deaths grows in the United States. Bulleted clinical pearls at the end of each chapter, as well as specific clinical recommendations and detailed case discussions throughout, make it easier for readers to retain knowledge and integrate it into their clinical practice. The guide also features sample documentation and scales, including a treatment contract and a patient consent, that can be used to

model documents in practice. This new edition of Office-Based Buprenorphine Treatment has been updated to reflect DSM-5 language, and two additional chapters have been included: one that addresses other pharmacotherapies useful in treating OUD, including methadone and naltrexone, and another that discusses OUD treatment specifically with regard to women's health and pregnancy. A discussion of the Comprehensive Addiction and Recovery Act (CARA). Advice for working with Alcoholics Anonymous and Narcotics Anonymous. A discussion on integrating buprenorphine into residential and inpatient opioid treatment programs. -- Publisher.

buprenorphine training for nurse practitioners: Lehne's Pharmacotherapeutics for Advanced Practice Nurses and Physician Assistants - E-Book Laura D. Rosenthal, Jacqueline Rosenjack Burchum, 2020-02-28 **Selected for Doody's Core Titles® 2024 in Pharmacology**Lehne's Pharmacotherapeutics for Advanced Practice Nurses and Physician Assistants, 2nd Edition builds on the same foundation of clearly explained, up-to-date, and clinically current content as the trusted Lehne undergraduate text, while focusing on the information that advanced practice nurses and Physician Assistants specifically need for safe and effective prescribing. Three introductory chapters provide foundational content for new prescribers in the areas of prescriptive authority, rational drug selection, prescription writing, and promoting positive outcomes of drug therapy. Core drug chapters are focused on the drugs that prescribers will most commonly see in clinical practice. A sharp focus is also placed on pharmacotherapeutic decision-making, with Black Box Warnings and new bulleted Key Prescribing Considerations features. The second edition features completely new chapters on Genetic and Genomic Considerations, Muscarinic Antagonists and Immunomodulators, and updated content throughout. It's everything advanced practice nursing and Physician Assistant students need to be safe and effective prescribers! - Introductory chapters tailored to the specific needs of prescribers cover topics such as prescriptive authority, rational drug selection and prescription writing, and promoting positive outcomes of drug therapy. - Carefully focused pharmacotherapeutic content reflects the drugs most commonly seen and used by prescribers, with emphasis not on the first drug discovered or developed in each class but on the agents most often used today. Primary care drugs are addressed first in each chapter as appropriate, followed by acute care drugs. - UNIQUE! Prescriber-focused pedagogical aids further reinforce the most important information for prescribers. - Integrated coverage of Canadian trade names appears throughout the text and is highlighted with a familiar maple-leaf icon. - Integrated coverage of interprofessional collaboration addresses the growing global interest in interprofessional collaboration and incorporates opportunities for interprofessional collaborative practice throughout.

medications and effective strategies for supporting the patients utilizing medication for the treatment of OUD. The goal of treatment for opioid addiction or OUD is remission of the disorder leading to lasting recovery. Recovery is a process of change through which individuals improve their health and wellness, live self-directed lives, and strive to reach their full potential. This TIP also educates patients, families, and the general public about how OUD medications work and the benefits they offer. buprenorphine training for nurse practitioners: Medications for Opioid Use Disorder Save Lives National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Medication-Assisted Treatment for Opioid Use Disorder, 2019-06-16 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

buprenorphine training for nurse practitioners: *Overcoming Opioid Addiction: The*

Authoritative Medical Guide for Patients, Families, Doctors, and Therapists Adam Bisaga, Karen Chernyaev, 2018-05-01 From a leading addiction expert, a desperately needed medical guide to understanding, treating, and finally defeating opioid use disorder Drug overdoses are now the leading cause of death for Americans under the age of 50, claiming more lives than the AIDs epidemic did at its peak. Opioid abuse accounts for two-thirds of these overdoses, with over 100 Americans dying from opioid overdoses every day. Now *Overcoming Opioid Addiction* provides a comprehensive medical guide for opioid use disorder (OUD) sufferers, their loved ones, clinicians, and other professionals. Here is expertly presented, urgently needed information and guidance, including: Why treating OUD is unlike treating any other form of drug dependency The science that underlies addiction to opioids, and a clear analysis of why this epidemic has become so deadly The different stages and effective methods of treatment, including detoxification vs. maintenance medications, as well as behavioral therapies How to deal with relapses and how to thrive despite OUD Plus a chapter tailored to families with crucial, potentially life-saving information, such as how to select the best treatment program, manage medications, and reverse an overdose.

buprenorphine training for nurse practitioners: *The American Psychiatric Association Publishing Textbook of Substance Use Disorder Treatment* Kathleen T. Brady, Frances R. Levin, Marc Galanter, Herbert D. Kleber, 2021-01-15 A robust revision, including many entirely new chapters addressing policy, the latest treatment approaches, and special topics, the Sixth Edition of *The American Psychiatric Association Publishing Textbook of Substance Use Disorder Treatment* offers a comprehensive and compelling review of this ever-evolving field. New sections address important topics that have gained prominence or become the focus of increased research attention since the Fifth Edition was released. For example, substance use and other psychiatric disorders often co-occur, and the resulting dual disorder is frequently associated with greater symptom severity and worse long-term prognosis than either disorder alone. Accordingly, the section on psychiatric comorbidity covers the epidemiology, assessment, and treatment of substance use disorders (SUDs) that co-occur with psychotic, mood, anxiety, eating, attention-deficit/hyperactivity, or trauma-related disorders. The section devoted to special populations has been revamped, and the topics have been thoroughly updated, some now covered by new contributors and others completely new to this edition. SUDs among women (including perinatal issues), adolescents, patients with chronic pain, sexual and gender minority populations, and older adults are addressed in detailed chapters, as are behavioral addictive disorders and cross-cultural aspects of substance-related and addictive disorders. Finally, the editors have included a section devoted to critically important topics in public health, including the U.S. opioid epidemic, cannabis policy and use, HIV/AIDS and hepatitis C, nicotine and public health, and the prevention of SUDs. New or noteworthy coverage includes the following: A chapter devoted to the legal and practical aspects of addiction in the occupational sphere, designed for clinicians who treat people with SUDs and/or develop workplace testing programs, employee assistance programs, and occupational drug/alcohol policies for these workers. A chapter that surveys the growing literature supporting the use of mindfulness, exercise, and other mind and body practices (e.g., yoga, acupuncture, tai chi) as complements or alternatives to standard SUD treatment models. A chapter devoted to hallucinogens, which clarifies their actions, psychoactive effects, historical uses, potential therapeutic benefits, and neural mechanisms, and both identifies their risks and seeks to dispel some of the misconceptions that have continued to surround them. A suite of chapters devoted to cannabis, encompassing a review of its neurobiology and history, a survey of effective treatment approaches and harm-reduction strategies for cannabis use disorder, and a consideration of evolving public policy around cannabis use. A trio of chapters devoted to nicotine and tobacco, encompassing a review of neurobiology, a survey of clinical assessment tools, a summary of the research base for effective treatments for tobacco use disorder, and a consideration of public health policy and interventions regarding tobacco use. Evidence-based, down to earth, and meticulously edited, the new Sixth Edition of *The American Psychiatric Association Publishing Textbook of Substance Use Disorder Treatment* is an essential resource for clinicians who treat SUDs in a variety of settings -- from examining rooms to emergency

departments, and from hospitals to recovery facilities.

buprenorphine training for nurse practitioners: *Leading an Academic Medical Practice* Lee B. Lu, Robert J. Fortuna, Craig F. Noronha, Halle G. Sobel, Daniel G. Tobin, 2024-02-28 Authored and edited by a prestigious team of academic clinician-educators affiliated with the Society of General Internal Medicine (SGIM), this now fully updated and expanded second edition of *Leading an Academic Medical Practice* provides a roadmap for clinic directors, core faculty, and educational leaders seeking to develop and administer a successful and cutting-edge academic medical practice. Each chapter of this book focuses on a particular aspect of clinic leadership and offers real-world examples and management pearls to help readers translate theory into practice. In addition to updated core content on topics such as Accreditation Council for Graduate Medical Education (ACGME) requirements, ambulatory curricula, clinical workflows, billing & coding, population health, evaluation and feedback, patient-centered medical home (PCMH) implementation, controlled substance policies, and student engagement, this new edition also focuses on issues particularly relevant for today's medical practice including social justice, diversity in residency practices, healthcare advocacy, physician burnout, telemedicine, and crisis management (e.g., public health emergencies). This resource is an ideal companion for academic clinician-educators across all levels of training and experience. Aspiring and new clinic directors will find this book offers essential tools to get started, and seasoned clinic leaders can use this publication to elevate their practice to the next level. In addition to clinic directors, core faculty, and administrative and educational leaders in academic outpatient medicine, healthcare specialists focused on system-based practice, quality-improvement, and patient safety will also find this resource valuable. Those working within the fields of primary care, internal medicine, and related specialties will find this book to be of special relevance. Now more than ever, the complexities of leading an academic medical practice present a unique challenge. This book, both comprehensive and practical, will help to overcome these challenges today and in the years to come.
