go math teacher edition grade 3: Empowering Teachers for Equitable and Sustainable Education Maria Teresa Tatto, 2024-04-16 This groundbreaking book uses a comprehensive study of a novel Master of Education program to showcase how teachers can be engaged in authoritative equity-based research, using comparative education theory, inquiry-based pedagogy, and the UNESCO SDGs as powerful frameworks. By developing agency to advance culturally sustaining and humanizing practices, it demonstrates how teachers can promote equity in their classrooms and communities. The central premise of the program is that teachers must become comparative, global, and local action researchers to have agency in their practice and to become effective advocates for the cultural and learning needs of their students, especially those in disadvantaged contexts or "learning at the bottom of the pyramid." By learning comparative framing and social science methods, reviewing the literature to select verifiable educational research, and developing and implementing a plan for action research, this book offers new ideas for how teachers can effectively respond to recent UNESCO calls to reimagine and create promising futures locally. By providing formative and summative evidence of culturally and socially transformative learning, and showcasing how teacher educators can engage teachers in authoritative justice-inquiry-based research, this book will appeal to scholars, faculty, and researchers of comparative education and teacher education, and development.

go math teacher edition grade 3: *Creating Joyful Classrooms* Sarah M. Butzin, 2018-01-15 Creating Joyful Classrooms is a practical response to the malaise in America's schools created by high stakes testing, disrespect for the teaching profession, and resources being redirected to charter schools and private school vouchers. Classroom teachers feel helpless and students feel hapless. Joy has left the building. This book offers the antidote to return joy and passion to teaching and learning. Whether a beginning teacher or a seasoned veteran, this book shows the way back to timeless child-centered best practices that engage young children and increase academic achievement. As joyful classrooms multiply, their success will drive out the poisonous rancor of cynicism and despair to become beacons of hope for children everywhere. This book also makes the case for changing the status quo in the elementary school. The standard traditional grade school is failing to meet the needs of children growing up in the information age. Elementary schools must evolve into multi-grade, multi-dimensional safe havens that challenge children academically, while remembering to cherish childhood. Based upon the theory of invitational education, this book provides specific strategies, along with classroom management tools, to create highly engaging classrooms for young children. It also offers inspiring stories of heroic teachers who beat the odds to bring joy back to school. It's not too late for a better tomorrow.

go math teacher edition grade 3: *Arithmetic Counts!* Paul Shoecraft, 2025-01-24 Dr.

Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the “lowly” subject of arithmetic and how to teach it. His breakthrough came when he experimented with teaching what needs to be understood instead of “known” (memorized), like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains. By teaching the essence of arithmetic in sensible ways and appealing to children’s love of games, songs, and movement, he’s proven that virtually ALL children can learn arithmetic — the foundation of algebra, higher mathematics, science, technology, and more, even music! When children understand arithmetic, they own it. It’s no longer just their teacher’s math. It’s their math! America’s children are being held back in math because of how arithmetic is drug out in elementary school. Virtually every textbook-based elementary school math program in use today is mind-numbing in its repetitiveness from grade to grade. The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized. Research shows that the human brain is not designed to remember things learned by rote when no longer practiced. That’s acknowledged in the “use-it-or-lose-it” aphorism that states the obvious, that we remember what we use and forget what we don’t. You know that to be true if you’ve ever forgotten things you once knew as well as your own name — things like an old address or a license plate number. Every child can understand base ten numeration when taught hands-on with arithmetic blocks. Thereby, every child can understand base ten arithmetic. And every child can learn how to count out the number facts, like $5 + 7 = 12$, $17 - 8 = 9$, $6 \times 7 = 42$, and $56 \div 7 = 8$, and, if they forget one, never have to guess and risk ridicule and bad grades if they guess wrong. What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if/when they forget.
