Americans are burying ourselves in our own waste. It's befouling our air, land, waters, food, and bodies. The US tosses out enough foodstuff to feed the rest of the world. America is the largest buyer of fashion and cosmetics, the second dirtiest industry in the world. We lead the planet in transportation usage and waste, and we're now polluting outer space. Throwaway Nation takes a look at the pileup of waste in the US, including the problem of plastic, the industry of overmedication, e-waste products, everyday garbage, fast fashion trash, space waste, and other forms of profligacy that serve to make our nation the biggest waster on the planet. Looking at the environmental impact of so much garbage, Dondero explores not just how we got here and where we're headed, but ways in which we might be able to curb the tide. From what you do and don't eat, what and how your products are packaged, the rampant production of clothes, the space and waste in which you work, live, what you breath, eat, drink, the tools you use to work and play, the energy overproduced and ill-used for a pleasant lifestyle, the waste you generate, and how humans are beginning to clutter the cosmos—all and more are profiled in the Throwaway Nation—and what we ought to do to prohibit and mitigate the flow of our garbage and to use it productively.

bill nye the science guy outer space: Fire in the Sky Gordon L. Dillow, 2020-08-04 This "accessible and always entertaining" (Booklist) combination of history, pop science, and in-depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now, as well as how prepared we are against asteroid-caused catastrophe. One of these days, warns Gordon Dillow, the Earth will be hit by a comet or asteroid of potentially catastrophic size. The only question is when. In the meantime, we need to get much better at finding objects hurtling our way, and if they're large enough to penetrate the atmosphere without burning up, figure out what to do about them. We owe many of science's most important discoveries to the famed Meteor Crater, a mile-wide dimple on the Colorado Plateau created by an asteroid hit 50,000 years ago. In his masterfully researched *Fire in the Sky*, Dillow unpacks what the Crater has to tell us. Prior to the early 1900s, the world believed that all craters—on the Earth and Moon—were

formed by volcanic activity. Not so. The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs, and it has opened up a new field of asteroid observation that is brimming with urgency. Dillow looks at great asteroid hits of the past and modern-day asteroid hunters and defense planning experts, including America's first Planetary Defense Officer. Satellite sensors confirm that a Hiroshima-scale blast occurs in the atmosphere every year, and a smaller, one-kiloton blast every month. While Dillow makes clear that the objects above can be deadly, he consistently inspires awe with his descriptions of their size, makeup, and origins. Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead, *Fire in the Sky* is, ultimately, a testament to our universe's celestial wonders.

Whether addressing climate change, the future of our society as a whole, or personal success, or stripping away the mystery of fire walking, there are certain strategies that get results: looking at the world with relentless curiosity, being driven by a desire for a better future, and being willing to take the actions needed to make change happen. He shares how he came to create this approach—starting with his Boy Scout training (it turns out that a practical understanding of science and engineering is immensely helpful in a capsizing canoe) and moving through the lessons he learned as a full-time engineer at Boeing, a stand-up comedian, CEO of The Planetary Society, and, of course, as Bill Nye The Science Guy. This is the story of how Bill Nye became Bill Nye and how he became a champion of change and an advocate of science. It's how he became The Science Guy. bill nye the science guy outer space: Unstoppable Bill Nye, 2015-11-10 “Climate change is coming. What can we do about it? TV's ‘Science Guy’ has some answers. . . . An important message delivered in a winning manner.” —Kirkus Reviews Just as World War II called an earlier generation to greatness, so the climate crisis is calling today's rising youth to action: to create a better future. In *Unstoppable*, Bill Nye expands the message for which he is best known and beloved. That

message is that with a combination of optimism and scientific curiosity, obstacles become opportunities, and the possibilities of our world become limitless. With a scientist's thirst for knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources. As Bill shares his vision, he debunks some of the most persistent myths and misunderstandings about global warming. When you are done reading, you'll be enlightened and empowered. Chances are, you'll be smiling, too, ready to join Bill and change the world.

bill nye the science guy outer space: Many Layers of Ecocentrism Abhik Gupta, 2024-06-17

This book unveils the myriad streams of ecocentric thoughts that have been flowing through the human mind – in indigenous communities, in the wisdom of philosophers, in the creative expressions of poets and writers – sometimes latent, but sometimes more explicit. The strength of this book lies in the fact that it attempts to show that ecocentrism had not emerged suddenly as a distinct line of philosophical thought or found its place among the various normative approaches toward nature, but the seeds of ecocentrism had always been running through human societies. Thus, this book not only emphasizes the “unity of life” but also reveals the inherent unity of all hues of ecocentrism. The book adopts a multidisciplinary approach, which is essential to dwell on a topic like ecocentrism which permeates the domains of disciplines as disparate as science, philosophy, religion, normative ethics, myths and folklore, poetry, and literature, among others. Despite this eclectic approach, the book attempts to maintain continuity among the chapters and present these concepts in a simple form that will be easily accessible by readers from all conceivable backgrounds. This book would be useful to the students, researchers, and faculty from the fields of ecology and environmental science, philosophy, sociology, religious studies, and literature. It will also be an indispensable companion for all nature lovers, activists, and general readers interested in the emergence and evolution of environmental thoughts.
