

elderly struggle with technology

Elderly Struggle with Technology: Understanding and Overcoming the Challenges

elderly struggle with technology is a reality that many families and communities face today. As technology continues to evolve at a rapid pace, it often leaves older adults feeling overwhelmed, frustrated, or even excluded. While younger generations tend to adapt quickly to new gadgets, apps, and digital platforms, seniors can find it difficult to keep up. This gap isn't just about age but involves factors like unfamiliarity, lack of confidence, and sometimes even physical limitations. Exploring why the elderly struggle with technology and how to support them can lead to more inclusive digital experiences that benefit everyone.

Why Do the Elderly Struggle with Technology?

The challenges seniors face with technology are multifaceted. Understanding these underlying reasons can help bridge the digital divide and foster better communication and connectivity.

Lack of Exposure and Experience

Many elderly individuals did not grow up with the technology that younger generations take for granted. Unlike millennials or Gen Z, who have been surrounded by computers, smartphones, and the internet from a young age, older adults often encounter these tools later in life. This lack of early exposure means they have to learn new skills from scratch, which can be intimidating.

Cognitive and Physical Barriers

Aging can bring about changes in memory, attention span, and problem-solving abilities, making it harder to learn new technological concepts. Additionally, physical challenges such as poor eyesight, reduced fine motor skills, or hearing impairments can limit their ability to interact with devices. Small buttons, complex interfaces, or unclear instructions add to the difficulty.

Fear of Making Mistakes or Breaking Something

Many seniors hesitate to explore technology due to fear. They worry about accidentally deleting important information, falling for scams, or damaging

expensive devices. This anxiety can prevent them from experimenting and gaining confidence, which is essential for learning.

Common Obstacles Faced by Seniors When Using Technology

Identifying specific obstacles helps in tailoring solutions that cater to the elderly's unique needs.

Complex User Interfaces

Modern apps and gadgets often prioritize sleek design over simplicity. Menus with multiple layers, icons without clear labels, and jargon-heavy language can confuse seniors. For example, a smartphone with several gestures or a smart TV remote with dozens of buttons can be overwhelming.

Lack of Personalized Support

Most technology tutorials are designed with younger users in mind. Elderly users may not find resources that match their learning pace or style. Without personalized assistance, they may give up quickly.

Financial Constraints

Not all seniors can afford the latest devices or high-speed internet. Budget limitations may force them to use outdated equipment, which can be slower and less compatible with modern software.

How Families and Communities Can Help

Supportive environments play a crucial role in helping elderly individuals overcome their struggles with technology.

Patience and Encouragement

Family members should approach teaching with patience, avoiding frustration or criticism. Encouraging seniors to ask questions and praising their progress builds confidence. Remember, learning technology is a new skill for

them.

Simple and Clear Instructions

Breaking down tasks into small, manageable steps can make learning less intimidating. Using plain language and avoiding technical jargon helps seniors understand better. Visual aids like screenshots or videos can also be beneficial.

Choosing Senior-Friendly Devices and Apps

Some products are designed specifically with older adults in mind. These may have larger buttons, simplified menus, voice commands, or hearing aid compatibility. Examples include tablets with simplified interfaces or smartphones with emergency features.

Community Workshops and Classes

Local libraries, senior centers, and nonprofits often offer technology classes tailored to elderly learners. These settings provide social interaction and hands-on practice, making the learning process more enjoyable and effective.

Practical Tips for Seniors to Navigate Technology with Confidence

Empowering seniors with actionable advice encourages independence and reduces anxiety around technology.

- **Start Small:** Begin with basic functions like making calls, sending texts, or browsing simple websites before moving on to more complex tasks.
- **Use Notes:** Writing down step-by-step instructions or keeping a cheat sheet near the device can serve as a helpful reference.
- **Leverage Voice Assistants:** Devices like Amazon Alexa or Google Assistant allow hands-free control, which can be easier for those with mobility issues.
- **Practice Regularly:** Frequent use helps reinforce learning, so setting

aside time each day to practice can build familiarity.

- **Stay Updated on Security:** Understanding basic online safety, such as recognizing phishing emails or using strong passwords, protects seniors from scams.

Technology's Role in Enhancing Elderly Lives

Despite the struggles, technology holds great promise for improving seniors' quality of life, if embraced with the right support.

Connecting with Loved Ones

Video calls, social media, and messaging apps enable older adults to maintain relationships with distant family and friends. This connectivity can alleviate feelings of loneliness and isolation.

Access to Health Resources

Telemedicine, medication reminders, and health monitoring apps allow seniors to manage their health more effectively and independently.

Entertainment and Learning Opportunities

Streaming services, online courses, and digital books provide endless options for entertainment and intellectual engagement, contributing to mental well-being.

Smart Home Technologies

Devices such as smart thermostats, security systems, and fall detectors can create safer and more comfortable living environments tailored to seniors' needs.

Every step toward understanding and addressing the elderly struggle with technology helps build a more inclusive digital world. By combining empathy, education, and appropriate tools, we can open doors for seniors to participate fully in today's connected society.

Frequently Asked Questions

What are the common challenges elderly people face when using technology?

Elderly people often face challenges such as difficulty understanding new interfaces, limited dexterity, vision or hearing impairments, lack of confidence, and anxiety about making mistakes while using technology.

How can technology be made more accessible for the elderly?

Technology can be made more accessible by designing user-friendly interfaces with larger buttons and fonts, providing voice commands, offering tutorials tailored for seniors, and ensuring compatibility with assistive devices.

What role does digital literacy play in helping the elderly overcome technology struggles?

Digital literacy is crucial as it empowers elderly individuals with the skills and confidence needed to navigate digital tools, access online services, and communicate effectively, thereby reducing frustration and enhancing independence.

Are there specific technologies designed to assist the elderly with their struggles?

Yes, there are technologies such as simplified smartphones, tablets with senior-friendly interfaces, voice-activated assistants, medical alert devices, and apps designed for easy communication and health monitoring.

How can family members support elderly relatives in adapting to new technologies?

Family members can offer patience, provide hands-on guidance, help set up devices, encourage practice in a low-pressure environment, and introduce technology gradually to build confidence and reduce anxiety.

What impact has the COVID-19 pandemic had on elderly people's relationship with technology?

The pandemic has accelerated the need for elderly individuals to use technology for communication, healthcare, and daily tasks, highlighting both the digital divide and the importance of providing support to improve their tech skills.

Can community programs help elderly individuals overcome technology struggles?

Community programs offering workshops, one-on-one coaching, and peer support groups can be highly effective in helping elderly individuals improve their digital skills and feel more comfortable using technology.

Elderly Struggle with Technology: Understanding the Challenges and Bridging the Digital Divide

elderly struggle with technology has become an increasingly important topic in today's digitally driven society. As technology evolves at a rapid pace, older adults often find themselves at a disadvantage, facing barriers that affect their ability to fully engage with digital tools and platforms. This gap not only impacts their access to information and services but also influences their social connectivity and overall quality of life. Examining the multifaceted reasons behind this struggle and exploring potential solutions reveals the broader implications for inclusivity in an ever-more connected world.

The Digital Divide and Its Impact on Older Adults

The concept of the digital divide traditionally refers to the gap between those who have access to modern information and communication technology and those who do not. For the elderly population, this divide is not merely about access but also encompasses skills, confidence, and willingness to adopt new technologies. According to a Pew Research Center study conducted in 2021, only 61% of adults aged 65 and older reported owning a smartphone, compared to 95% of adults aged 18-29. Furthermore, internet usage among seniors lags behind younger demographics, with approximately 75% of seniors going online, highlighting a significant disparity.

This gap has practical consequences. Many public services, healthcare systems, and social platforms increasingly rely on digital channels for communication and delivery. When older adults struggle with technology, they risk isolation, reduced access to vital information, and diminished autonomy. These challenges have been exacerbated by the COVID-19 pandemic, which accelerated the shift to online services, making digital literacy for seniors more critical than ever.

Key Factors Contributing to the Elderly Struggle with Technology

Several interconnected factors contribute to the difficulties older adults face when interacting with technology:

- **Physical Limitations:** Aging often comes with declining vision, reduced fine motor skills, and hearing impairments, which can make using small screens, complex interfaces, or audio cues challenging.
- **Lack of Familiarity:** Many elderly individuals did not grow up with computers or smartphones, leading to a steeper learning curve compared to younger generations who are digital natives.
- **Security Concerns:** Fear of scams, privacy breaches, and misinformation can deter seniors from fully engaging with online platforms, creating an additional psychological barrier.
- **Complex User Interfaces:** Modern applications and devices often prioritize aesthetics or advanced features over simplicity, which can overwhelm older users unfamiliar with these designs.
- **Limited Support and Training:** A lack of accessible, patient, and tailored education programs means many seniors do not receive the help they need to build confidence and skills.

Technological Literacy and the Learning Curve

Developing technological literacy is a crucial step toward overcoming the elderly struggle with technology. Unlike younger users who may intuitively navigate digital environments, older adults often require structured learning environments. Community centers, libraries, and senior organizations have begun offering digital literacy workshops, focusing on basic skills such as internet browsing, email use, and smartphone operation.

However, the effectiveness of these programs varies. Studies indicate that personalized instruction, hands-on practice, and ongoing support yield better outcomes than one-time training sessions. Additionally, incorporating familiar contexts and real-life applications—such as online banking or video calls with family—can motivate seniors to engage more deeply with technology.

The Role of Interface Design in Accessibility

Design plays a pivotal role in either enabling or hindering technology adoption among the elderly. User interface (UI) and user experience (UX) designers are increasingly aware of the need to create accessible solutions that accommodate age-related changes. Features such as larger fonts, high-contrast color schemes, simplified navigation, voice commands, and haptic feedback can significantly enhance the usability of devices for seniors.

For example, smartphones featuring “easy mode” interfaces strip down the complexity by offering larger icons and fewer options, making them more approachable. Similarly, tablets designed specifically for older users often include pre-installed apps for communication, health monitoring, and entertainment, reducing the cognitive load associated with setup and customization.

Social and Psychological Dimensions

The elderly struggle with technology is not only a matter of physical ability or technical skill but also deeply tied to social and psychological factors. Feelings of frustration, embarrassment, and fear of making mistakes can discourage seniors from experimenting with new devices. This emotional barrier can lead to avoidance, reinforcing the digital divide.

Moreover, social isolation, which disproportionately affects older adults, can limit their exposure to peers who might encourage or assist with technology use. Conversely, intergenerational programs that connect seniors with younger mentors have shown promise. These initiatives not only improve digital competence but also foster meaningful social interaction and reduce feelings of loneliness.

Health and Well-being Implications

Technology, when accessible and effectively used, has the potential to greatly improve the health and well-being of elderly individuals. Telemedicine, online health portals, and wearable devices enable continuous monitoring and easier communication with healthcare providers. Additionally, digital platforms can provide cognitive stimulation through games and educational content, supporting mental health.

However, the struggle to navigate these tools can result in missed opportunities for better care and support. Bridging this gap is essential as the global population ages and healthcare systems increasingly integrate digital solutions.

Strategies to Bridge the Gap

Addressing the elderly struggle with technology requires a comprehensive approach involving multiple stakeholders:

1. **Designing Age-Friendly Technology:** Companies should prioritize accessibility and simplicity in product development, ensuring devices meet the needs of older users.
2. **Expanding Training Opportunities:** Governments, nonprofits, and community organizations must invest in ongoing, tailored digital literacy programs with flexible formats to accommodate different learning styles.
3. **Encouraging Family Involvement:** Family members can play a crucial role in supporting seniors with technology by offering patient guidance and creating a non-judgmental learning environment.
4. **Raising Awareness and Reducing Stigma:** Public campaigns can help normalize the learning process and reduce the fear associated with technology among elderly populations.
5. **Policy Initiatives:** Policymakers should consider subsidies for devices, internet access programs, and incentives for companies to develop senior-friendly technologies.

Ultimately, technology should empower all individuals regardless of age, and recognizing the unique challenges faced by older adults is the first step toward meaningful inclusion.

The elderly struggle with technology is a complex issue rooted in physical, cognitive, and socio-emotional factors. As society becomes ever more reliant on digital tools, it is imperative to foster environments that support seniors in overcoming these barriers. Progress in this area not only enhances individual lives but also strengthens community connections and ensures equitable access to the benefits of technological advancements.

elderly struggle with technology: *Human Aspects of IT for the Aged Population. Design for Aging* Jia Zhou, Gavriel Salvendy, 2016-07-04 The two LNCS volume set 9754-9755 constitutes the refereed proceedings of the Second International Conference on Human Aspects of IT for the Aged Population, ITAP 2016, held as part of the 18th International Conference on Human-Computer Interaction, HCII 2016, held in Toronto, ON, Canada, in July 2016, jointly with 14 other thematically conferences. The total of 1287 papers and 186 poster papers presented at the HCII 2016 conferences were carefully reviewed and selected from 4354 submissions. LNCS 9754, Design for Aging (Part I), addresses the following major topics: designing for and with the elderly; technology use and acceptance by older users; psychological and cognitive aspects of interaction and aging; mobile and wearable technologies for the elderly. LNCS 9755, Healthy and Active Aging (Part II), addresses these major topics: smart and assistive environments; aging and social media; aging, learning, training and games; and aging, mobility and driving.

elderly struggle with technology: *Proceedings of the 22nd Congress of the International Ergonomics Association, Volume 1* Sangeun Jin, Jeong Ho Kim, Yong-Ku Kong, Jaehyun Park, Myung Hwan Yun, 2025-08-30 This book presents the proceedings of the 22nd Congress of the International Ergonomics Association (IEA 2024), held on August 25-29, 2024. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Working with Computer Systems, Human Modelling and Simulation, Neuroergonomics, Biomechanics, Affective Design, Anthropometry, Advanced Imaging.

elderly struggle with technology: Transformative Healthcare Practice through Patient Engagement Graffigna, Guendalina, 2016-06-30 Recent literature suggests that patient participation and engagement may be the ideal solution to the efficacy of healthcare treatments, from a clinical and pragmatic view. Despite the growing discussions on the necessity of patient engagement, there is no set of universally endorsed, concrete guidelines or practices. Transformative Healthcare Practice through Patient Engagement outlines the best practices and global strategies to improve patient engagement. This book features a convergence of healthcare professionals and scholars elucidating the theoretical insights borne from successful patient education, and the technological tools available to sustain their engagement. This book is a useful reference source for healthcare providers, students and professionals in the fields of nursing, therapy, and public health, managers, and policy makers.

elderly struggle with technology: Information and Communication Technologies for Ageing Well and e-Health Martina Ziefle, María Dolores Lozano, Maurice Mulvenna, 2024-07-25 This book constitutes the refereed post-conference proceedings of the 9th International Conference, ICT4AWE 2023, held in Prague, Czech Republic, during April 22-24, 2023. The 9 full papers of ICT4AWE 2023 included in this book were carefully reviewed and selected from 39 submissions. They focus on current research in Information and Communication Technologies for Ageing Well and e-Health, such as data and real-time analytics, health information systems, decision support systems, computer vision and healthcare robotics, medical data science technologies, Internet of Things and smart devices for independent living, human communication and behavioural studies of senior citizens, home care monitoring systems, health geography, cultural issues and emergency and alerts handling.

elderly struggle with technology: *Human Aspects of IT for the Aged Population* Qin Gao, Jia

Zhou, 2025-05-28 The three-volume set LNCS 15809-15811 constitutes the thoroughly refereed proceedings of the 11th International Conference on Human Aspects of IT for the Aged Population, ITAP 2025, held as part of the 27th HCI International Conference on Human-Computer Interaction, HCII 2025, which took place in Gothenburg, Sweden, in June 2025. The total of 1430 papers and 355 posters included in the HCII 2025 proceedings was carefully reviewed and selected from 7972 submissions. The three volumes cover topics as follows: Part I: Designing Older User Experiences; Social Connectedness and Psychological Support Part II: Smart Homes and Communities for Aging in Place; eHealth for Aging Part III: Older Adults and the (Smart) City; Technology Adoption, IT Literacy and the Digital Divide; Living with AI.

elderly struggle with technology: *Technology and Aging in America*, 1985 Report on the impact of social change and technological change on older people in the USA - briefly describes population trends; discusses new health technology and the role of health services in prevention, after care and care of the aged; considers housing and living conditions and income generating activities and job adaptation to facilitate labour force participation of older workers, etc. Glossary, graphs, illustrations, references, statistical tables.

elderly struggle with technology: *Mental Blocks* Phoenix Soulfire, AI, 2025-03-15 Mental Blocks offers a practical guide to overcoming cognitive barriers that hinder creative thinking and effective problem-solving. By exploring the psychology behind mental roadblocks, the book illuminates how cognitive biases like confirmation bias and functional fixedness can unconsciously skew our judgment. Readers will discover that everyone can enhance their cognitive abilities by consciously addressing these constraints. This book uniquely integrates neuroscience, cognitive psychology, and hands-on techniques to foster mental flexibility. It delves into the neural mechanisms underlying creative thought while also providing actionable strategies. For example, it explains how biases influence our perceptions and how mindfulness can help us overcome them. The book progresses systematically, beginning with fundamental concepts related to cognition and creativity. It then explores major cognitive obstacles, dedicating chapters to in-depth analyses of biases such as anchoring bias. The final sections investigate techniques like lateral thinking and design thinking, all presented in an accessible manner for professionals and anyone interested in unlocking their mental potential.

elderly struggle with technology: *Using Technology to Improve Care of Older Adults* Diane Chau, Thomas Osborne, 2017-08-28 State-of-the-art developments in multiple new technologies for older adult care Grounded in a unique team-based geriatrics perspective, this book delivers a broad range of current, evidence-based knowledge about innovative technology that has the potential to advance the care and well being of older adults. It provides key information about the development, selection, and implementation of technology products, and describes research evidence, education-based initiatives, and systems thinking. The book also examines challenges and barriers to implementation, adoption and innovation. From telehealth and assistive technology in the home to simulation and augmented reality in educational settings, the text provides a hands-on, field-tested articulation of how products can aid in the transitional care process, chronic care delivery, and geriatrics/gerontology education. It discusses technology developments in rural areas, home telehealth, wearable technology, personalized medicine, social robots, technology to assist seniors with cognitive impairments, the potential of artificial intelligence to enhance health care of older adults. The text is written to help health care professionals select the appropriate technology for their needs. Key Features: Describes the most current technology resources, evidence, and developments for older adult care Based on a team-centered approach Written by interprofessional health care providers experienced in implementing, developing and adopting technology to assist older adults Includes case studies depicting technology-related successes and failures Addresses the challenges, barriers, and opportunities for transforming aging with technology across transitions of care

elderly struggle with technology: **Proceedings of the 2024 International Conference on Artificial Intelligence and Communication (ICAIC 2024)** Yulin Wang, 2024-09-23 This is an

open access book. With great pleasure and anticipation, we extend our warmest welcome to the 2024 International Conference on Artificial Intelligence and Communication (ICAIC 2024). As we embark on this journey of intellectual exchange and collaboration, we are thrilled to bring together leading experts, researchers, and practitioners from around the globe to explore the latest advancements and breakthroughs in these dynamic fields. ICAIC 2024 promises to be a platform where innovative ideas converge, fostering insightful discussions and shaping the future of AI and communication technologies. With diverse sessions, workshops, and keynote speeches, we aim to delve into the multifaceted aspects of AI and communication, uncovering new possibilities and opportunities for growth and development. Our call for papers encompasses several tracks, each designed to showcase the latest research and developments in key areas of interest. These tracks include: AI and Communication Fundamental Intelligent Sensors and IoT Communication Speech and Image Processing 5G and Communication Technologies We invite scholars, researchers, and industry professionals to submit their original contributions and join us in exploring these vital domains. Together, let us delve into the realms of innovation and discovery, driving forward the frontiers of knowledge and transforming ideas into tangible solutions.

elderly struggle with technology: The Impact of Social Media, Gaming, and Smartphone Usage on Mental Health , 2024-02-06

elderly struggle with technology: Computers Helping People with Special Needs Klaus Miesenberger, Joachim Klaus, Wolfgang Zagler, 2003-08-02 Success and efficiency are the latest standards and scales of our society. Virtual surroundings and communication rooms, electronic portals and platforms are pushing us into a new world of personal and professional interaction and cooperation. The network to subdue violence is fragile and crumbly, tradition is no longer a power of our community. What of leisure time, dreams, and fantasy? What of education in the family, at school and at university? Travelling round the world to develop yourself -how man becomes man: pleading for a new determination of the idea of education -a mission of past centuries inadequate nowadays? Regarding September 11th last year, the conflicts and confrontations round the globe, and events in our direct surroundings these questions seem to be a cry at least to reflect upon what is happening around us and where we -all of us -still play an active role. An International Conference on Computers Helping People with Special Needs is like an island -is this a topic at all these days, is it worth discussing the area of ICT and the situation of people with disabilities, persons who are segregated from developing their personal and professional careers? Indeed the biennial meeting has never included these actualities, but the basic idea behind ICCHP, starting in 1989, was to focus on these fringe groups and to offer a platform of exchange on all aspects of Human Computer Interaction and the usage of ICT for people with special needs.

elderly struggle with technology: Accessible Communications Lisa Riemers, Matisse Hamel-Nelis, 2025-10-03 Ready to build credibility and optimize your communications for real business impact? Accessible Communications is a practical guide designed for mid-career professionals seeking to develop effective, inclusive messaging that aligns with evolving regulations and business goals. Written by award-winning communications consultants Lisa Riemers and Matisse Hamel-Nelis, this book offers clear models and frameworks to help you apply accessibility principles confidently across emails, documents, videos and social media. With real-world examples and actionable tools, it empowers you to implement strategies that expand reach, protect reputation and enhance career growth. You'll learn how to: - Use proven frameworks to build accessible communications strategically - Apply practical tools that optimize messaging across multiple formats - Understand evolving legislation and its impact on communications - Develop skills to increase audience engagement and trust This guide supports your career development by helping you create communications that comply with regulations and drive business success. Themes include: Accessibility and inclusivity, Communication strategy and frameworks, Practical application and tools, Career development and credibility building, Regulatory compliance and business impact

elderly struggle with technology: Joe Public 2030 Chris Bevolo, 2022-02-15 On the ten-year anniversary of the release of the original Joe Public Doesn't Care About Your Hospital book, author

Chris Bevolo and Revive have set their sights a decade in the future with *Joe Public 2030: Five Potent Predictions Reshaping How Consumers Engage Healthcare*. The book explores five key ways consumer health engagement may change over the coming decade, covering everything from AI and personal monitoring to consumerism, new competition, the politicization of healthcare, and growing health disparities. The book makes five bold predictions about that future, which range from exciting and promising to ominous and discouraging. Based on insights developed by a team of researchers, strategists, and futurists at Revive, the five core predictions are supported by more than 250 resource citations and input from 22 industry experts who were interviewed for the book, including health system CEOs, venture capitalists, entrepreneurs, and physicians. The purpose of the book is to spark conversation about how the future of health and healthcare in the U.S. might emerge, and how individuals and organizations might want to prepare for – or even change – that future. This is Bevolo's seventh book, and the fourth (and final) installment in the Joe Public series. The book is scheduled for release in January 2022.

elderly struggle with technology: Elderly Crime and Victimization Manish Joshi, 2025-02-20 *Elderly Crime and Victimization: Perspectives* offers a comprehensive examination of crimes committed against and by the elderly. This book brings together insights from researchers, practitioners, and policymakers to shed light on various dimensions of elder crime and victimization. We explore the vulnerability of the elderly to physical abuse, financial exploitation, and neglect, emphasizing factors like cognitive decline, social isolation, and limited access to resources. Societal attitudes and ageism further contribute to their victimization. By challenging stereotypes and promoting positive attitudes towards aging, we aim to reduce these risks. The book also addresses crimes committed by the elderly, such as fraud and theft, examining factors like financial pressures and mental health issues. We propose strategies for preventing and addressing these crimes. Our interdisciplinary approach draws on criminology, sociology, psychology, and social work, offering a nuanced understanding of elderly crime and victimization. This book is a valuable resource for understanding and addressing the challenges faced by the elderly in relation to crime.

elderly struggle with technology: Proceedings of the 2023 7th International Seminar on Education, Management and Social Sciences (ISEMSS 2023) Shakila Yacob, Berat Cicek, Joanna Rak, Ghaffar Ali, 2023-10-30 This is an open access book. ISEMSS 2023 was held on July 14-16, 2023 in Kunming, China. And provide a platform for scholars in related fields to exchange ideas and: Develop and advance social development through the study and application of certain social issues. Open up new perspectives and broaden the horizons of looking at issues in the discussions of the participants. Create a forum for sharing, research, and exchange on an international level, allowing participants to learn about the latest research directions, results, and content in different fields thus stimulating them to new research ideas. Papers on Education, Management and Social Sciences will be accepted and published in the form of conference proceedings for those who cannot attend the conference.

elderly struggle with technology: Artificial Intelligence in Healthcare for the Elderly Sandeep Sharma, Preeti Nagrath, Bhawna Singla, Joel J. P. C. Rodrigues, 2025-08-26 *Artificial Intelligence in Healthcare for the Elderly* provides valuable insights into how artificial intelligence can transform healthcare through personalized monitoring, ethical considerations, and real-world applications. Artificial intelligence has the potential to revolutionize healthcare for the elderly by providing efficient and personalized monitoring and care. Though this technology has the potential to revolutionize care, there is currently little information on the potential of this technology in elderly healthcare. *Artificial Intelligence in Healthcare for the Elderly* explores AI algorithms that can transform health monitoring for older adults by analyzing data from wearable devices, electronic health records, and other sources that provide real-time data analysis, detect early warning signs of diseases, and offer personalized treatment. This book addresses the critical ethical, societal, and practical aspects of elderly care that are often overlooked with insights from various disciplines, including healthcare, technology, ethics, and sociology, to offer a holistic perspective on AI's impact on aging. *Artificial Intelligence in Healthcare for the Elderly* offers an all-encompassing perspective

on AI technologies employed in elderly healthcare by examining the specific types of technology used and delineating its role in elderly healthcare, drawing insights from existing research and case studies.

elderly struggle with technology: Digital Cities Roadmap Arun Solanki, Adarsh Kumar, Anand Nayyar, 2021-03-29 DIGITAL CITIES ROADMAP This book details applications of technology to efficient digital city infrastructure and its planning, including smart buildings. Rapid urbanization, demographic changes, environmental changes, and new technologies are changing the views of urban leaders on sustainability, as well as creating and providing public services to tackle these new dynamics. Sustainable development is an objective by which the processes of planning, implementing projects, and development is aimed at meeting the needs of modern communities without compromising the potential of future generations. The advent of Smart Cities is the answer to these problems. Digital Cities Roadmap provides an in-depth analysis of design technologies that lay a solid foundation for sustainable buildings. The book also highlights smart automation technologies that help save energy, as well as various performance indicators needed to make construction easier. The book aims to create a strong research community, to have a deep understanding and the latest knowledge in the field of energy and comfort, to offer solid ideas in the nearby future for sustainable and resilient buildings. These buildings will help the city grow as a smart city. The smart city has also a focus on low energy consumption, renewable energy, and a small carbon footprint. Audience The information provided in this book will be of value to researchers, academicians and industry professionals interested in IoT-based architecture and sustainable buildings, energy efficiency and various tools and methods used to develop green technologies for construction in smart cities.

elderly struggle with technology: Basic Geriatrics Volume - I Mr. Rohit Manglik, 2024-05-16 Introduces the fundamentals of aging, physiological changes, and common geriatric health issues. Designed for undergraduate nursing students.

elderly struggle with technology: Education for the Elderly in the Asia Pacific Pennee Narot, Narong Kiettikunwong, 2021-09-25 In many countries across the Asia Pacific region, people are adapting to the new demographic shift, but there is nonetheless much concern. This book documents the various educational approaches rendered by both public and private sectors to enable elderly individuals in their own countries to re-engage in society more inclusively, to stay longer in the labour market, and to become less dependent on the state or their families. In order to produce active, healthy, and productive aging citizens, the experiments showcased by this book highlight how adaptive action is needed across many policy areas, with emphasis on shaping structural differences in the composition and organisation of higher education systems that can better foster lifelong learning among elderly citizens. The book is a great venue to underline the interplay of the theory and practices of vastly complex challenges.

elderly struggle with technology: Post-pandemic Digital Realities of Older Adults Loredana Ivan, Hannah R. Marston, Dennis Rosenberg, 2023-10-16

Related to elderly struggle with technology

What Age Is Considered Elderly? - Age is just a number, right? But what number is considered elderly? The term “elderly” often denotes someone who is very old and frail and is not always seen as a term of

ELDERLY Definition & Meaning - Merriam-Webster The meaning of ELDERLY is rather old; especially : being past middle age. How to use elderly in a sentence
