

house tree person test interpretation

****Unlocking the Mind: A Deep Dive into House Tree Person Test Interpretation****

House tree person test interpretation offers a fascinating window into the human psyche through a seemingly simple drawing exercise. Developed in the mid-20th century, this projective psychological test invites individuals to draw a house, a tree, and a person, and then uses these drawings to glean insights into their personality, emotions, and unconscious thoughts. If you've ever wondered how these sketches can reveal so much about a person's inner world, you're in the right place to explore the nuances of this intriguing assessment.

What Is the House Tree Person Test?

The House Tree Person (HTP) test was created by psychologist John N. Buck in the 1940s as a tool to assess personality and emotional functioning. It falls under the umbrella of projective tests, which are designed to bypass conscious defenses by encouraging individuals to express themselves through ambiguous stimuli—in this case, drawings.

The test is straightforward: participants are asked to draw a house, a tree, and a person on a blank sheet of paper. While it might seem like a child's art assignment, each drawing element is carefully analyzed by psychologists to uncover hidden feelings, conflicts, or traits. The simplicity of the task hides a complex interpretative process, making it a popular tool in clinical psychology, counseling, and even forensic settings.

How Does House Tree Person Test Interpretation Work?

Interpreting the HTP test involves evaluating multiple factors within the drawings. The focus isn't on

artistic skill but rather on the content, style, and specific details that emerge. These can include:

- **Size and placement:** Where the drawings appear on the page and their relative sizes can indicate how the individual views themselves in relation to others or their environment.
- **Details and omissions:** The presence or absence of windows, doors, branches, or facial features might hint at openness, concealment, or emotional expression.
- **Line quality and pressure:** How firmly or lightly someone draws can reflect energy levels, confidence, or anxiety.
- **Proportions and distortions:** Unusual proportions or exaggerated features may symbolize specific emotional concerns or personality traits.

These elements are interpreted in the context of the individual's background, presenting issues, and other psychological assessments. Trained clinicians use the HTP test to complement other diagnostic tools, not as a standalone measure.

Decoding the House Drawing

The house is often associated with the concept of “home” and symbolizes security, family relationships, and personal comfort zones. When interpreting the house drawing, certain features stand out:

- **Size and structure:** A large, sturdy house might indicate feelings of safety and stability, whereas a small or fragmented house could suggest insecurity or vulnerability.
- **Windows and doors:** Windows often symbolize openness to the outside world or communication. Closed or boarded-up windows may point to guardedness or isolation.

- **Chimney and roof:** The presence of a chimney can represent warmth and nurturing, while a missing or damaged roof might denote feelings of exposure or lack of protection.

By examining these aspects, psychologists can gain insight into how the individual perceives their home life and emotional security.

Understanding the Tree Drawing

Trees are rich symbols of growth, life, and self-identity. The way a person draws a tree can provide clues about their inner strength, personal growth, and emotional state.

- **Roots and trunk:** Strong roots and a solid trunk may reflect a well-grounded personality, while thin or broken roots might suggest instability or feelings of being unanchored.
- **Branches and leaves:** The extent and complexity of branches can indicate social connections or aspirations. Sparse branches might imply loneliness or limited social interaction.
- **Damage or abnormalities:** Broken branches, knots, or unusual shapes could symbolize trauma, internal conflict, or emotional wounds.

In the context of house tree person test interpretation, the tree often represents the self, making it a key focus during analysis.

Insights from the Person Drawing

The person drawing is perhaps the most direct window into how individuals view themselves and others. This figure can reveal self-image, social attitudes, and emotional wellbeing.

- **Facial features:** Detailed eyes, mouth, and nose can suggest openness and self-awareness. Conversely, missing or minimal features might indicate withdrawal or emotional suppression.
- **Posture and body proportions:** An upright, balanced figure may reflect confidence, while slumped

or distorted bodies could point to low self-esteem or distress.

- **Clothing and accessories:** These details may reveal how the individual wants to present themselves or aspects of their identity they emphasize.

Because the person drawing is deeply personal, it often provides the richest source of information in the HTP test.

Applications of the House Tree Person Test Interpretation

The HTP test is widely used because it offers a non-threatening way to explore complex psychological issues. Here are some common areas where it proves valuable:

- **Clinical diagnosis:** Identifying anxiety, depression, trauma, or personality disorders.
- **Child psychology:** Helping children express emotions that may be difficult to verbalize.
- **Forensic psychology:** Assessing individuals in legal contexts, including custody evaluations.
- **Counseling and therapy:** Serving as a starting point for discussions about self-perception and relationships.

Because the test taps into unconscious material, it can be especially useful when verbal communication is limited or when clients are reluctant to share their feelings openly.

Tips for Interpreting House Tree Person Test Drawings

If you're a student, clinician, or simply curious about the HTP test, here are some helpful pointers to keep in mind:

1. **Context is key:** Always consider the individual's background, emotional state, and the circumstances under which the drawing was made.
2. **Avoid over-interpretation:** Not every detail has deep meaning; some may simply reflect artistic choices or mood at the moment.
3. **Look for patterns:** Consistent themes across the house, tree, and person can strengthen interpretive insights.
4. **Combine with other tools:** Use the HTP test alongside interviews, questionnaires, or other assessments for a fuller picture.
5. **Respect cultural differences:** Symbolism can vary widely across cultures, so tailor interpretations accordingly.

These guidelines help ensure a balanced, ethical approach to house tree person test interpretation.

Challenges and Criticisms

Like many projective techniques, the HTP test faces some skepticism, particularly regarding reliability and validity. Critics argue that interpretations can be subjective and heavily dependent on the clinician's experience. Additionally, cultural biases may influence how drawings are perceived.

Despite these concerns, many practitioners find the test valuable as a complementary tool that encourages self-expression and dialogue. When used thoughtfully and in conjunction with other assessments, the HTP test can enrich understanding rather than serve as a definitive diagnosis.

Exploring the house tree person test interpretation reveals how art and psychology intersect to unlock hidden aspects of personality. Whether used in therapy, research, or personal growth, the test invites a creative and compassionate look into the human experience, reminding us that sometimes, a simple drawing can tell a profound story.

Frequently Asked Questions

What is the House-Tree-Person (HTP) test used for?

The HTP test is a projective psychological test used to assess personality traits, emotional functioning, and underlying issues by analyzing drawings of a house, a tree, and a person.

How is the House-Tree-Person test administered?

The test involves asking the individual to draw a house, a tree, and a person on separate sheets of paper. The drawings are then interpreted by a psychologist based on various elements like size, placement, detail, and omissions.

What does a large house drawing typically indicate in the HTP test?

A large house drawing may suggest a desire for security, comfort, or dominance in one's home life, whereas a small or neglected house might indicate feelings of insecurity or instability.

How do psychologists interpret the tree drawing in the HTP test?

The tree drawing is often seen as a representation of the self and personal growth. Features like healthy branches and roots may indicate emotional stability, while broken branches or missing roots could suggest psychological distress or insecurity.

What significance does the person drawing have in the HTP test?

The person drawing reflects the individual's self-image and interpersonal relationships. Details such as posture, facial features, and clothing can reveal confidence levels, social comfort, and emotional state.

Can the House-Tree-Person test diagnose mental disorders?

While the HTP test can provide insights into a person's psychological state, it is not a standalone diagnostic tool. It should be used alongside other assessments for accurate diagnosis.

What are common indicators of anxiety or depression in HTP drawings?

Indicators may include small or incomplete figures, heavy or shaky lines, erasures, and omission of key details, which can suggest anxiety, low self-esteem, or depressive symptoms.

Is the House-Tree-Person test culturally biased?

The HTP test can be influenced by cultural factors, as drawing styles and symbolism vary across cultures. Therefore, interpreters must consider cultural context to avoid misinterpretation.

****House Tree Person Test Interpretation: A Comprehensive Analysis****

house tree person test interpretation serves as a pivotal tool in psychological assessment, particularly in understanding an individual's personality traits, emotional functioning, and subconscious conflicts. Developed by John N. Buck in the mid-20th century, the House-Tree-Person (HTP) test is a projective drawing technique widely utilized in clinical, educational, and forensic settings. This article delves into the nuances of the test, exploring its interpretative framework, psychological underpinnings, and practical applications, while maintaining a balanced and investigative perspective on its efficacy and limitations.

Understanding the House Tree Person Test

The House-Tree-Person test is a projective measure designed to elicit responses through drawing, wherein individuals are asked to draw a house, a tree, and a person on separate sheets of paper. The premise is that these drawings reveal aspects of the person's inner world, including their self-perception, interpersonal relationships, and emotional state. Psychologists analyze various elements of the drawings, such as size, placement, details, omissions, and stylistic choices, to infer psychological constructs.

Unlike standardized objective tests, the HTP test relies heavily on qualitative interpretation, making it crucial for practitioners to apply it with caution and professional expertise. Its flexibility allows for adaptation across age groups and cultural backgrounds, but also introduces variability that challenges consistent interpretation.

Historical Context and Development

John N. Buck introduced the HTP test in 1948 as a tool intended to supplement verbal assessments with visual expression. It was grounded in the belief that individuals project unconscious aspects of their psyche onto ambiguous stimuli—in this case, drawings. The test quickly gained popularity due to its simplicity and the rich qualitative data it could provide.

Over time, variations and scoring systems have been developed to enhance reliability and validity, including the use of quantitative checklists and computer-assisted scoring. Despite these advancements, the HTP remains fundamentally a projective technique, emphasizing the interpretive skills of the clinician.

Key Components of House Tree Person Test Interpretation

The interpretation of the HTP test is multi-faceted, involving an examination of the symbolic meanings associated with each drawing and their interrelations. Below are the primary focus areas in the analysis:

1. The House Drawing

The house typically symbolizes the individual's family, home life, and sense of security. Interpretative elements include:

- **Size and Placement:** A large, centrally placed house may indicate a strong attachment to home or family, while a small or isolated house might suggest feelings of alienation or insecurity.
- **Details and Features:** The presence or absence of windows, doors, chimneys, and fences can provide insights into openness, privacy, and perceived safety.
- **Structural Integrity:** A well-constructed, balanced house may reflect emotional stability, whereas distorted or fragmented houses could signify psychological distress or conflict.

2. The Tree Drawing

Trees often represent the self, growth, and vitality. They can reflect the individual's psychological development and how they cope with challenges.

- **Roots and Branches:** Prominent roots might symbolize groundedness, whereas broken or sparse branches could indicate vulnerability or emotional fragility.
- **Bark Texture and Leaf Detail:** Detailed bark and abundant leaves may suggest resilience and richness of inner life; conversely, bare or rough textures could point to hardship or emotional weariness.
- **Height and Form:** Tall, upright trees often convey confidence, while stunted or crooked trees may reveal feelings of inadequacy or distorted self-image.

3. The Person Drawing

The person figure is central to understanding self-concept and interpersonal dynamics.

- **Proportions and Posture:** Balanced proportions and open postures tend to reflect healthy self-esteem, whereas distorted figures or closed postures might indicate anxiety or defensiveness.
- **Facial Features and Expression:** Detailed facial features can signal self-awareness, and the expression may provide clues to mood or affective state.
- **Clothing and Accessories:** Inclusion of clothing details or accessories can be interpreted as efforts to present oneself in a particular way or mask vulnerabilities.

Applications and Interpretive Strategies

The house tree person test interpretation is utilized in various settings, each requiring tailored approaches.

Clinical Psychology

In clinical contexts, the HTP test aids in diagnosing emotional disturbances, personality disorders, and trauma. For example, children who have experienced abuse may depict houses with barred windows or broken doors, indicating feelings of entrapment or danger. Similarly, distorted person drawings may suggest body image issues or dissociative tendencies.

Educational Settings

School psychologists employ the HTP to assess developmental and emotional challenges in children. The test can highlight social withdrawal, anxiety, or family conflicts that impact academic performance. The nonverbal nature of the test makes it particularly useful for children with limited verbal skills or language barriers.

Forensic Evaluations

In forensic psychology, HTP interpretations contribute to understanding defendants' mental states or victims' trauma histories. However, courts often view projective tests with caution due to concerns over reliability and subjective bias in interpretation.

Strengths and Limitations of the House Tree Person Test

Every psychological tool has its merits and drawbacks, and the HTP test is no exception.

Strengths

- **Non-Threatening and Accessible:** Drawing tasks are generally less intimidating than direct questioning, facilitating engagement, especially with children.
- **Rich Qualitative Data:** The test provides nuanced insights into subconscious processes that might not emerge through verbal methods.
- **Flexibility:** Applicable across diverse populations and adaptable for various clinical or research purposes.

Limitations

- **Subjectivity in Interpretation:** The test's reliance on clinician judgment can lead to inconsistent results and potential bias.
- **Lack of Standardization:** Despite attempts to quantify aspects, the test lacks universally accepted scoring criteria.
- **Cultural Sensitivity:** Symbolism in drawings may vary widely across cultures, complicating interpretation without cultural context.

Comparative Perspective: HTP Test Versus Other Projective Measures

When compared to other projective tests such as the Rorschach Inkblot Test or Thematic Apperception Test (TAT), the House Tree Person test offers distinct advantages and disadvantages:

- **Ease of Administration:** The HTP is simpler and quicker to administer, making it practical in time-constrained environments.
- **Expressive Freedom:** Drawing allows for creative expression, potentially revealing aspects that inkblots or story narration may not.
- **Interpretative Complexity:** However, the Rorschach and TAT have more established scoring systems, which can enhance reliability in some contexts.

Best Practices in House Tree Person Test Interpretation

Given the interpretive challenges, psychologists are advised to:

1. Combine HTP results with other assessment tools to form a comprehensive clinical picture.
2. Consider developmental, cultural, and situational factors influencing the drawings.

3. Maintain awareness of personal biases and employ standardized scoring systems where available.
4. Use the test primarily as a supplementary tool rather than a standalone diagnostic measure.

The house tree person test interpretation continues to be a valuable component in psychological assessment, offering a window into the complex and often hidden dimensions of human personality. While it demands careful and context-sensitive application, its unique ability to engage clients through creative expression ensures its ongoing relevance in the evolving landscape of psychological diagnostics.

house tree person test interpretation: Kinetic-house-tree-person Drawings (K-H-T-P)

Robert C. Burns, 1987 This book contains the first documentation of combining house, tree, and person into a single drawing. It helps enrich clinician's test batteries and aids psychologists and physicians in understanding the emotions and self-awareness of their clients. It is richly illustrated and teaches the important skill of using visual metaphors in clinical settings to understand and assist clients. The author covers all aspects of drawing interpretation, including size, placement, stroke or line characteristics, and the possible individual characteristics of each element within the house, tree, and person drawings.

house tree person test interpretation: The Assessment of Child and Adolescent

Personality Howard M. Knoff, 2002-12-31 Now available in paper for the first time, this volume brings together leading contributors to provide a comprehensive review of theory, research, and practice in child and adolescent personality assessment. Organized for easy reference, the book is divided into four parts. Part I summarizes basic theories, issues, and concepts, setting forth a framework for assessment as a hypothesis-generating, problem-solving process. Part II describes and evaluates a wide range of relevant approaches, tests, and techniques, marshaling the available data and reviewing administration procedures, scoring, and interpretation. In Part III, the process by which personality assessment is translated into effective intervention strategies and programs for children is examined in depth. A summary of major perspectives and recommended practices is presented in Part IV, which also considers future needs and directions for the field.

house tree person test interpretation: The House-tree-person (H-T-P) Manual

Supplement: Administration and Interpretation of the H-T-P Test , 1971

house tree person test interpretation: *The Psychological Examination of the Child* Theodore H. Blau, 1991-02-07 Unlike other books on child testing, this one establishes a conceptual framework for psychological evaluation of children. Instead of focusing on the assessment of particular conditions, it deals with what is important to find out about all children, normal and disturbed, and sets forth a standardized means of analysis, the Basic Psychological Examination. Covers practical aspects of the examination, including the interview group, the examination setting, preparing the child, formulating reports and recommendations, and conferring with parents. Comparable in scope and comprehensiveness to a physician's medical exam, the Basic Psychological Examination enables the practitioner to identify virtually anything out of order in a child's development. Practical and boldly original, the text commends itself to educators, researchers and clinicians alike.

house tree person test interpretation: Handbook of Personality Assessment Irving B. Weiner, Roger L. Greene, 2011-01-31 This comprehensive, balanced guide to personality assessment, written by two of the foremost experts in the field, is sure to become the gold standard of texts on this topic. The Handbook of Personality Assessment covers everything from the basics, including a historic overview and detailed discussion of the assessment process and its psychometric foundations, to valuable sections on conducting the assessment interview and the nature, interpretation, and applications of the most popular self-report (objective) and performance-based (projective) measures. A concluding section of special topics such as computerized assessment, ethical and legal issues, and report writing are unique to this text.

house tree person test interpretation: Pervasive Developmental Disorders Mitzi Waltz, 2003-01-30 If you or someone you know has been diagnosed with a pervasive developmental disorder (autism, Asperger's Syndrome, Rett Syndrome, Childhood Disintegrative Disorder, or PDD-NOS), this book is for you. In an informative style, weaved with personal stories from parents, the book covers various topics, including: Getting a diagnosis (including preparing for a diagnostic interview in a medical, psychiatric, or school setting, with descriptions of all diagnostic tests and checklists/questions used by professionals) Treatment options (such as medications/supplements, sensory integration, occupational/physical/speech therapy, behavior modification, floor time, and more Coping with diagnosis and treatment (including emotions and support systems, insurance, and educational plans).

house tree person test interpretation: Comprehensive Handbook of Psychological Assessment, Volume 2 Mark J. Hilsenroth, Daniel L. Segal, 2004-04-19 Comprehensive Handbook of Psychological Assessment, Volume 2 presents the most up-to-date coverage on personality assessment from leading experts. Contains contributions from leading researchers in this area. Provides the most comprehensive, up-to-date information on personality assessment. Presents conceptual information about the tests.

house tree person test interpretation: Psychological Experts in Divorce Actions Marc J. Ackerman, Andrew W. Kane, 2005-01-01 Emotionally charged issues abound in matrimonial practice, especially in custody disputes. Expert testimony can have a dramatic impact on the outcome of a case, and when matters are highly sensitive or sensational the seeming objectivity of an expert can be dispositive. To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving. Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' Psychological Experts in Divorce Actions pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D ., and Andrew W. Kane, Ph.D ., are licensed

psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience—testing parties to a divorce and treating psychological patients in the clinic—and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers can readily apply. They also examine vital issues including: Ethics —confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse —bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing —personality tests (including MMPI-2, And The new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS, BPS); and many more How divorce affects families —custody, placement, age and gender differences, grandparents, sexual preference, psychological problems

house tree person test interpretation: Handbook on Optimizing Patient Care in Psychiatry Amresh Shrivastava, Avinash De Sousa, Nilesh Shah, 2022-11-21 This handbook examines current mental health research, challenges in patient care, and advances in clinical psychiatry with the aim of improving approaches toward the screening of at-risk individuals, facilitating access to care, and supervising rehabilitation. Combining evidence-based research with clinical case studies, international experts provide detailed, holistic insights into our understanding of mental disorders through biological, social, interpersonal, and economical lenses. Models of intervention, prevention, and treatment are provided, along with methods for continued care and patient advocacy. Finally, experts analyze the future of psychiatric research and mental health care. Readers will gain greater understanding of the finer nuances of handling psychiatric cases and a holistic perspective of optimizing patient care within this field. This innovative book contributes to the development of community management of various psychiatric disorders and will be of interest to case managers, mental health workers, doctors, nurses, and many more.

house tree person test interpretation: **Drawings in Assessment and Psychotherapy** Leonard Handler, Antoinette D. Thomas, 2013-11-20 Drawing is a language, projected by children and adults, reflecting their joy and pain. It is used extensively by clinical psychologists, art therapists, social workers, and other mental health professionals in the assessment and treatment of children, adolescents, adults, and couples. This book brings together a renowned group of professionals to analyze the research and application of the most popular assessment and treatment tools. Tests discussed include the Draw-a-Person Test, the House-Tree-Person Test, the Kinetic Family Drawing Test, the Art Therapy-Projective Imagery Assessment, and the Wartegg Drawing Completion Test. Working with sexually and physically abused children, assessing clients with anorexia nervosa, and the influence of osteopathic treatment on drawings are some of the special topics considered. Numerous case studies are also included.

house tree person test interpretation: **Research in Education** , 1966

house tree person test interpretation: Contemporary Clinical Psychology Thomas G. Plante, 2010-08-20 Contemporary Clinical Psychology, Third Edition introduces students to this fascinating profession from an integrative, biopsychosocial perspective. Thoroughly updated to include the latest information on topics central to the field, this innovative approach to studying clinical

psychology delivers an engaging overview of the roles and responsibilities of today's clinical psychologists that is designed to inform and spark interest in a future career in this dynamic field. Highlighting evidence-based therapies, multiple case studies round out the portrayal of clinical practice. Designed for graduate and undergraduate students in introductory clinical psychology courses.

house tree person test interpretation: Interpreting Children's Drawings Joseph H. Di Leo, 2013-04-15 First published in 1983. In this comprehensive volume, Dr. Di Leo once again brings to the reader the fruitful combination of extensive knowledge of children's drawings and an approach to the subject that is intimate and humane, but highly sophisticated. Those familiar with his books have come to expect the lucid style with which Dr. Di Leo leads the clinician toward incisive interpretations of children's drawings, pointing out key features and using, where appropriate, parallels from the world of art and literature. His discussions of over 120 drawings reproduced in this volume cover an astonishing range of topics, including: Interpretation, Formal and Stylistic Features, Mostly Cognition (drawing a man in a boat), Mostly Affect (drawing a house), Projective Significance of Child Art, The Whole and Its Parts, Global Features, Body Parts, Sex Differences and Sex Roles in Western Society as Perceived by Children, Laterality and Its Effects on Drawing, Tree Drawings, and Personality Traits, Emotional Disorder Reflected in Drawings, Pitfalls, Role of the Arts in Education for Peace, and Reflections. In his analyses, Dr. Di Leo skillfully singles out examples of overinterpretation and other pitfalls, and answers questions such as: What does the therapist do when the child refuses to draw the family? Is the drawing a self-image? What are the differences between regressive drawings compared with the immature drawings of normal children? Even such fascinating topics as art brut, creativity, madness, and child art are discussed. The reader will find thought-provoking both the author's astute analyses and his keen awareness of the influence of society on children and the pictures they draw. Therapists in the field will find the book remarkably penetrating, while students in the field will delight in its clarity and thoroughness. Everyone who works with the drawings of children will find it absorbing.

house tree person test interpretation: An Introduction to Art Therapy Research Lynn Kapitan, 2011-01-11 An Introduction to Art Therapy Research is a pragmatic text that introduces readers to the basics of research design in quantitative and qualitative methodology written in the language of art therapy, with particular attention to the field's unique aspects, current thinking, and exemplars from published art therapy research studies. This combination of a broad, standard approach to research design plus art therapy's particular perspective and major contributions to the subject make the text suitable for courses in introductory research, survey of art therapy history and literature, art therapy assessment, and ethics. The book includes strategies for evaluating research reports and writing for peer-reviewed publication, features that make the text of special value to students, practitioners, doctoral candidates, and academics writing for publication. An online instructor's manual with student resources is available and offers material to enhance the pedagogical features of the text.

house tree person test interpretation: AI 2023: Advances in Artificial Intelligence Tongliang Liu, Geoff Webb, Lin Yue, Dadong Wang, 2023-11-26 This two-volume set LNAI 14471-14472 constitutes the refereed proceedings of the 36th Australasian Joint Conference on Artificial Intelligence, AI 2023, held in Brisbane, QLD, Australia during November 28 - December 1, 2023. The 23 full papers presented together with 59 short papers were carefully reviewed and selected from 213 submissions. They are organized in the following topics: computer vision; deep learning; machine learning and data mining; optimization; medical AI; knowledge representation and NLP; explainable AI; reinforcement learning; and genetic algorithm..
